Introduction

Barron's Essential Words for the IELTS will help familiarize you with the vocabulary you will find on the reading and listening sections of the IELTS exam (International English Language Testing System). As the number of words you understand when you are reading and listening increases, your speaking and writing vocabulary will improve as well.

VOCABULARY AND THE IELTS

Vocabulary is not tested directly on the IELTS. There are no questions on the IELTS that ask specifically for the meaning of a word. However, comprehension is tested. Can you understand what you read? Can you understand what you hear? The more words you know, the more you will understand. The more words you know, the more fluently you will be able to speak and write.

Essential Words for the IELTS will teach you 600 words that you might find on the exam in reading and listening and that you might use in writing and speaking. You will also learn skills that will help you learn new words easily.

- *Essential Words for the IELTS* will teach you how to use context clues. The context provides clues to the meaning of a word. These clues may be in the same sentence or in the same paragraph. You will learn to look for definitions, synonyms, or paraphrases within the text.
- Punctuation is another context clue. A definition or a synonym is often set apart by parentheses, commas, dashes, or a colon. You will learn to recognize these clues.
- Analyzing a word also helps you determine the meaning of a word. Compound words, prefixes, and suffixes are other context clues. You will learn to recognize common prefixes and suffixes and how words are joined together.
- If context clues cannot help you determine the meaning of a word, you can use a dictionary designed for learners of English. You will learn dictionary skills to help you choose the correct definition of a word.
- You will also learn about word families. These are the different parts of speech—noun, verb, adjective, and adverb—that share a similar meaning. The book presents charts with example sentences for each part of speech. The word-family charts include the most common forms as well as multiple forms.

ESSENTIAL WORDS FOR THE IELTS

In *Essential Words for the IELTS* you will practice one very effective vocabulary strategy that will improve your comprehension. This effective strategy is to use a word four ways: **Read** the word, **write** the word, **listen** to the word, and **speak** the word. Every activity in each chapter will help you develop this skill.

When you learn a new word, you should practice the same strategy. If you hear a new word, write the new word in a sentence. Read the sentence to yourself. Say the sentence aloud. Every chance you get, review the words you are learning. Say them, write them, read them, and listen to them.

IELTS STUDY CONTRACT

You must make a commitment to study English. Sign a contract with yourself. You should never break a contract—especially a contract with yourself.

- Print your name below on line 1.
- Write the time you will spend each week studying English on lines 4–8. Think about how much time you have to study every day and every week, and make your schedule realistic.
- Sign your name and date the contract on the last line.
- At the end of each week, add up your hours. Did you meet the requirements of your contract?

MY IELTS STUDY CONTRACT

I, _____, promise to study for the IELTS. I will begin my study with *Barron's Essential Words for the IELTS*, and I will also study English on my own.

I understand that to improve my English I need to spend time on English.

I promise to study English _____ a week. I promise to learn _____ new words every day.

I will spend _____ hours a week listening to English.

I will spend _____ hours a week writing English.

I will spend _____ hours a week speaking English.

I will spend _____ hours a week reading English.

This is a contract with myself. I promise to fulfill the terms of this contract.

SELF-STUDY ACTIVITIES

Here are some ways you can improve your English vocabulary on your own. Check the ones you plan to try. Add some of your own ideas.

Internet-Based Self-Study Activities:

LISTENING

- Podcasts on the Internet
- News websites: CNN, BBC, NBC, ABC, CBS
- Movies in English
- YouTube

SPEAKING

- Use Skype to talk to English speakers (<http://www.skype.com>)

WRITING

- Write e-mails to website contacts
- Write a blog
- Leave comments on blogs
- Post messages in a chat room
- Use Facebook and MySpace

READING

- Read news and magazine articles online
- Do web research on topics that interest you
- Follow blogs that interest you

Other Self-Study Activities

LISTENING

- Listen to CNN and BBC on the radio
- Watch movies and TV in English
- Listen to music in English

SPEAKING

- ___ Describe what you see and do out loud
- ___ Practice speaking with a conversation buddy

WRITING

- ___ Write a daily journal
- ___ Write a letter to an English speaker
- ___ Make lists of the things you see every day
- ___ Write descriptions of your family and friends

READING

- ___ Read newspapers and magazines in English
- ___ Read books in English

Suggestions for Self-Study Activities

Whether you read an article in a newspaper or on a website, you can use that article in a variety of ways to improve your vocabulary while you practice reading, writing, speaking, and listening in English.

- Read about it.
- Paraphrase and write about it.
- Give a talk or presentation about it.
- Record or make a video of your presentation.
- Listen to or watch what you recorded. Write down your presentation.
- Correct your mistakes.
- Do it all again.

PLAN A TRIP

- Go to *www.concierge.com*.
- Choose a city, choose a hotel, go to that hotel's website and choose a room, and then choose some sites to visit (*reading*).
- Write a report about the city. Tell why you want to go there. Describe the hotel and the room you will reserve. Tell what sites you plan to visit and when. Where will you eat? How will you get around? Now write a letter to someone recommending this place (*writing*).

- Pretend you have to give a lecture on your planned trip (*speaking*). Make a video of yourself talking about this place. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then choose another city and do this again.

SHOP FOR AN ELECTRONIC PRODUCT

- Go to *www.cnet.com*.
- Choose an electronic product and read about it (*reading*).
- Write a report about the product. Tell why you want to buy one. Describe its features. Now write a letter to someone recommending this product (*writing*).
- Pretend you have to give a talk about this product (*speaking*). Make a video of yourself talking about this product. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then choose another product and do this again.

DISCUSS A BOOK OR A CD

- Go to *www.amazon.com*.
- Choose a book or CD or any product. Read the product description and reviews (*reading*).
- Write a report about the product. Tell why you want to buy one or why it is interesting to you. Describe its features. Now write a letter to someone and recommend this product (*writing*).
- Pretend you have to give a talk about this product (*speaking*). Make a video of yourself talking about this product. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then choose another product and do this again.

DISCUSS ANY SUBJECT

- Go to *http://simple.wikipedia.org/wiki/Main_Page*. This website is written in simple English.
- Pick any subject and read the entry (*reading*).
- Write a short essay about the topic (*writing*).
- Give a presentation about it (*speaking*). Record the presentation. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Choose another topic and do this again.

FOLLOW THE NEWS

- Go to <http://news.google.com>. Google News has a variety of links.
- Pick one event and read the articles about it (*reading*).
- Listen to an English-language news report on the radio or watch a news program on TV about the same event (*listening*). Take notes as you listen.
- Write a summary of what you read and heard. Then write a short essay about the event (*writing*).
- Pretend you are a news reporter. Use the information from your notes to report the news (*speaking*). Record the presentation. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then choose another event and do this again.

EXPRESS AN OPINION

- Read a letter to the editor in the newspaper (*reading*). You can read sample letters to the editor at www.publishaletter.com.
- Write a letter in response in which you say whether or not you agree with the opinion expressed in the first letter. Explain why (*writing*).
- Pretend you have to give a talk explaining your opinion (*speaking*). Record yourself giving the talk. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then read another letter to the editor and do this again.

REVIEW A BOOK OR MOVIE

- Read a book (*reading*). Think about your opinion of the book. What did you like about it? What didn't you like about it? Who would you recommend it to and why?
- Pretend you are a book reviewer for a newspaper. Write a review of the book with your opinion and recommendations (*writing*). You can find examples of book reviews at www.powells.com/review.
- Give an oral presentation about the book. Explain what the book is about and what your opinion is (*speaking*). Record yourself giving the presentation. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then read another book and do this again.
- You can do this same activity after watching a movie (*listening*). You can find links to movie reviews to use as models at www.mrqe.com.

SUMMARIZE A TV SHOW

- Watch a TV show in English (*listening*). Take notes as you listen.
- After watching, write a summary of the show (*writing*).
- Use your notes to give an oral summary of the show. Explain the characters, setting, and plot (*speaking*). Record yourself speaking. Then watch the video and write down what you said (*listening*). Correct any mistakes you made and record the presentation again. Then watch another TV show and do this again.

HOW TO USE THIS BOOK

The book is divided into ten units, each one focusing on a different theme. There are three topics per unit, and each introduces twenty new vocabulary words in the context of the unit theme. You will practice these vocabulary words by doing exercises that look just like the questions on the IELTS. You can use this book in conjunction with *Barron's IELTS* and *Barron's IELTS Practice Exams* to reinforce the skills practiced in those books and improve your performance on the practice tests.

You can study the units in any order you like. Many of the words introduced in earlier units are repeated in later units. For this reason, you may find it helpful to study the units in order, but it isn't necessary.

NOTE

The book includes many footnotes to show you the British English equivalents of American English words. You will also hear a variety of accents on the audio so that you can become more comfortable with the variations in English. Both British English and American English spelling are acceptable on the exam.

Each unit follows the same format:

Words and Definitions

Each lesson begins with a list of twenty vocabulary words and a separate list of twenty definitions, followed by a reading passage. You will look for the vocabulary words as you read the passage and use the context to help you match each word with its correct definition.

Reading Comprehension

The reading passage is followed by IELTS-style reading comprehension questions that focus on the vocabulary words of the unit. There are a variety of question types throughout the book so you will have an opportunity to practice most of the types of reading comprehension questions that appear on the IELTS.

ESSENTIAL WORDS FOR THE IELTS

Word Families

Next you will find word family charts—noun, verb, adjective, and adverb forms of five or six words selected from the unit vocabulary list. You will practice these words in an exercise that asks you to select the correct form of a word to complete each sentence.

Dictionary Skill/Word Skill

This section uses one or two words from the vocabulary list to help you practice using a dictionary or analyzing a word to determine its meaning.

Listening

You will listen to a talk or conversation and answer IELTS-style listening comprehension questions that focus on words from the unit vocabulary list. The different types of talks and conversations and the different question types found in the four listening sections of the IELTS are distributed throughout the book, so you will get practice with listening comprehension from all four sections of the IELTS listening test.

Writing

You will write in response to an IELTS-style writing task that uses words from the unit vocabulary list. This is also an opportunity for you to use some of the vocabulary words in your response. IELTS Task 1- and Task 2-type writing tasks are evenly distributed throughout the book.

Speaking

You will practice speaking in response to two or three IELTS-style speaking questions that use words from the unit vocabulary list. This is also an opportunity for you to use some of the vocabulary words in your response.

Reading

Environmental Impacts of Logging

A

From shipping crates to paper bags, the **logging** industry supplies the raw materials for an **array** of products. However, this is not without untold harm to the **environment**. The damage includes **habitat** loss, pollution, and climate change, with the effects spanning the globe from the rain forests of Central Africa, Southeast Asia, and South America to the northern forests of Canada and Scandinavia. The effects of **logging** **extend** beyond just the **felling** of a swath of trees. **Nutrients**, water, and shelter for plants, animals, and microorganisms throughout the ecosystem are also lost; many life forms—both **terrestrial** and **aquatic**—are becoming endangered as forests **vanish**.

B

Trees protect the soil beneath them; thus, tree loss can affect soil integrity. For example, the rain forest floor, home to **myriad** plant life as well as insects, worms, reptiles and amphibians, and small mammals, relies on a dense canopy of branches and leaves to keep it healthy and intact. The canopy prevents surface runoff by **intercepting** heavy rainfall so that water can drip down slowly onto the porous earth. Tree roots also **stabilize** the soil and help prevent **erosion**. In return, a healthy soil encourages root development and microbial activity, which contribute to tree growth and well-being. A major factor in **logging**-related soil damage comes from road building, with trucks and other heavy equipment compressing the spongy soil, creating furrows where water collects, and disrupting the underground water flow. Eventually, the topsoil wears away, leaving behind an infertile layer of rocks and hard clay.

C

Logging can also damage **aquatic habitats**. **Vegetation** along rivers and stream banks helps maintain a steady water flow by blocking the entry of soil and other residue, and tree shade **inhibits** the growth of algae. Removing trees obliterates these benefits. When eroding soil flows into waterways, the organic matter within it consumes more oxygen, which can lead to oxygen depletion in the water, killing fish and other **aquatic** wildlife.

D

Trees provide a natural **defense** against air **pollution**. They remove carbon dioxide from the atmosphere while they emit oxygen, and their leaves filter **pollutants** from the air. Cutting down trees keeps **pollutants**

airborne, where they can mix with water vapor¹ and form acid rain. Water quality in nearby streams and rivers also deteriorates as tree loss contributes to increased sedimentation.

E

In a healthy forest ecosystem, trees draw moisture from the soil and release it into the atmosphere while they provide shade to lessen evaporation. Thus, **deforestation impacts rainfall patterns**, leading to flooding as well as drought and forest fires. **Deforestation** is responsible for about one-fifth of carbon dioxide emissions worldwide, making it a major contributor to climate change—in particular, global warming. In the Amazon basin alone, **deforestation** is responsible for millions of tons of carbon dioxide being released into the atmosphere annually. Some **logging** companies burn large tracts of forest just to facilitate access to one area—a practice² that discharges even more carbon dioxide.

F

Forests, especially the tropical rain forests, are a vital natural resource with extensive biodiversity and irreplaceable wildlife **habitats**. More responsible **logging** practices would help ensure that they are protected for future generations.

Answer the questions about **Environmental Impacts of Logging**.

Questions 1–4

*The reading passage contains six paragraphs, A–F.
Which paragraphs discuss the following information?
Write the correct letter, A–F.*

Reading

Bird Migration

Migration is the regular movement of animals between their **breeding** grounds and the areas that they **inhabit** during the rest of the year. Many types of animals **migrate**, but **bird migration** in particular has fascinated **observers** for centuries. Migration is an excellent example of how nature has responded to the biological **imperative** for **species** to **evolve** and spread out into all possible ecological niches that can provide the conditions necessary for species to **breed** and raise young.

The most common form of **bird migration** involves traveling¹ to higher latitudes to **breed** during the warm season and then returning to lower latitudes during the nonbreeding period. This form of migration allows birds to breed in areas that provide **optimal** conditions for nesting and feeding their young. Because of the way in which the continents are situated upon Earth, migration of this type takes place primarily into the higher latitudes of the Northern **Hemisphere**. No land birds are known to migrate into the higher latitudes of the Southern Hemisphere; only **species** of seabirds migrate to the Southern Hemisphere to **breed**.

Although most **bird migration** takes place between the lower and higher latitudes of the Northern **Hemisphere**, many species are transequatorial, living in the Northern **Hemisphere** during the **breeding** season and in the Southern **Hemisphere** during the remainder of the year. A well-known example of transequatorial migration is the arctic tern. This tern, which **breeds** in the arctic regions and winters in antarctic waters, travels 24,000 miles a year during migration.

Not all migration is long distance. Some **species** exhibit altitudinal migration. Their **breeding** areas are in higher elevations, near or at the peaks of mountains, and they spend the nonbreeding season in neighboring² valleys or other nearby low country. This variety of migration is typical of many **grouse species**, including the ptarmigan, a type of arctic grouse. Many rock ptarmigan never leave the high arctic tundra, spending their **breeding** season atop **windswept** arctic peaks and the winter season in nearby valleys, **enduring** some of the coldest conditions on Earth.

During migration, most birds fly for a limited period each day, probably about six to eight hours, typically flying distances of several hundred miles. Some birds, however, undertake much longer flights when their routes include crossing large bodies of water or other geographic features such as deserts and mountains. For example, many species regularly cross the Gulf of Mexico, a trip that requires a continuous flight of more than 1,000 miles and takes from twenty-four to thirty-six hours or longer. An extreme example of nonstop bird migration is done by the

¹BrE: travelling

²BrE: neighbouring

miles from Alaska to New Zealand each year. At the start of its trip, about 55 percent³ of its body weight is made up of the fat necessary to fuel this amazing journey.

How birds manage to unerringly travel between distant locations is one aspect that has fascinated observers for centuries. Modern-day researchers have attempted to understand this feat. Most studies have found that migratory birds all have some ability to navigate and an innate drive to travel in a particular direction. Nocturnal migrants, those species that travel at night, seem to take their navigational cues from the stars. When the stars are obscured by clouds, nocturnal migrants may become confused and return to land or stray off course. Diurnal migrants, those migrating during the day, take their cues from the location of the sun. In addition, diurnal migrants have also been shown to use geographic features such as mountain ranges or seacoasts as other cues for navigation. Because the stars and the sun move constantly over the course of twenty-four hours, this suggests that migrating birds also have some sense of time.

Answer the questions about **Bird Migration**.

Questions 1–4

Do the following statements agree with the information in the reading passage?

Write

- TRUE** if the statement agrees with the information.
FALSE if the statement contradicts the information.
NOT GIVEN if there is no information on this in the passage.

- _____ 1. Transequatorial birds cross from one hemisphere to the other when they migrate.
- _____ 2. Many migratory birds breed in the Southern Hemisphere.
- _____ 3. Migrating birds spend the warm months where conditions for breeding are optimal.
- _____ 4. Many birds fail in their migration because they do not have enough body fat to fuel the journey.

³BrE: per cent

Questions 5–8

*Look at the following descriptions of migratory habits. Match each type of bird with the correct description. Write the correct letter, **A** or **B**.*

- A** Diurnal species of birds

Plant Life in the Taklimakan Desert

The Taklimakan Desert, second in size only to Africa's Sahara Desert, **occupies** some 337,600 square kilometers¹ (130,300 square miles) of northwestern China—an area about the size of Finland. **Sparse** rainfall, daily temperature **swings** of up to 20°C (68°F), and **violent** sandstorms make it one of the most **extreme** environments on Earth.

Eighty-five percent² of the Taklimakan Desert consists of shifting sand dunes, some up to 250 meters³ tall, that are largely free of vegetation. Yet, **transitional** areas between the open desert and oases on the desert **fringe** support **diverse** plant forms that not only have **adapted** to the harsh conditions but actually **thrive** there.

Successful desert plants are **resilient** to scorching summers and frigid winters, drought, and high-salt conditions. The plants' principal defense⁴ against these environmental **stressors** consists of drawing in as much water as possible while **minimizing moisture** loss. Three Taklimakan plants—*Populus euphratica*, *Tamarix ramosissima*, and *Alhagi sparsifolia*—represent some of the most **diverse**, **prolific** vegetation in the area; although they share many survival strategies, each has developed unique coping **mechanisms** of its own.

The Euphrates poplar, *Populus euphratica*, the only tall tree in the Taklimakan ecosystem, has an extensive root system that allows it to absorb water far from the standing tree. *P. euphratica* controls **evaporation** by opening and closing the stomata, or tiny pores, on the leaf surface in response to the amount of moisture being lost through the leaves to the surrounding air. These stomata generally remain open during the day while the plant conducts photosynthesis.

P. euphratica can endure high-salt concentrations in the soil. It takes in unlimited amounts of salt through the roots, up the stem, and into leaves, where it **dilutes** the normally toxic salt by increasing the number and volume of its cells.

Tamarix ramosissima, a small tree with needlelike leaves commonly known as tamarisk or salt cedar, takes in enormous amounts of water via a far-reaching root system many times the size of the plant above ground. Like *P. euphratica*, tamarisk can naturally **determine** when to close stomata to inhibit evaporation and regulate photosynthesis.

¹BrE: kilometres

²BrE: per cent

³BrE: metres

⁴BrE: defence

Tamarisk has a high tolerance for salty conditions and even produces its own salt, which it **accumulates** in special glands between the leaves and then releases onto leaf surfaces. Leaves dropping to the ground make the soil more saline, or salty, giving tamarisk a competitive advantage over less salt-tolerant plants.

Alhagi sparsifolia, a spiny shrub, thrives in the Taklimakan Desert even though it uses large amounts of water, especially during the summer months. With only a few wispy roots in the upper soil, it is unaffected by occasional flooding. Most of its roots reach down deep, where they take up water from as far as sixteen meters below ground. Unlike *P. euphratica* and *T. ramosissima*, which open and close stomata according to conditions on the leaf surface, *A. sparsifolia* does so according to hydraulic conductance—that is, the ease with which it takes up groundwater.

Although desert plants have adapted for their own survival, they also help protect their ecosystem by stabilizing sand dunes, preventing erosion, presenting a barrier to sandstorms, and conserving biodiversity.

Answer the questions about **Plant Life in the Taklimakan Desert**.

Questions 1–3

Choose the correct letter, **A**, **B**, **C**, or **D**.

- Most of the Taklimakan Desert is covered with
 - tamarisk.
 - spiny plants.
 - sand dunes.
 - diverse plant life.
- Plants in the Taklimakan Desert
 - grow only in areas above 250 meters high.
 - thrive in extreme conditions.
 - are not very hardy.
 - are mostly tall trees.
- Environmental stressors in the Taklimakan Desert include
 - sparse sunlight.
 - lack of salt in the soil.
 - extreme temperatures.
 - periods of heavy rainfall.

Questions 4-7

*Which of the following mechanisms used by plants to survive in the desert environment are mentioned in the passage? Choose **four** answers from the list below.*

- A** Having strong roots that can hold on during violent sandstorms
- B** Closing pores to minimize loss of moisture
- C** Occupying a place in the shade of a larger plant to avoid the scorching desert sun
- D** Diluting the salt that the plant takes in
- E** Having large root systems that can reach water far from the plant
- F** Adding salt to the soil to minimize competition from other plants
- G** Accumulating water in the leaves of the plant

Peripheral Vision in Sports

Focus in on something as small as a pin. Notice that everything else that fills your whole area of possible sight is **indistinct**, lacking in detail. We **tolerate** this large outlying field of **blur**, this **peripheral** view, without taking note. We **unconsciously** accept it. Sometimes we take charge of how we process all that **blur** surrounding the tiny center¹ that our **vision** is focused on. Athletes best **demonstrate** just how much we can use the entire range of our vision, fanning out to the periphery.

An **athlete's performance**, necessitating high levels of coordination and reaction time, depends on training visual abilities, not just tuning muscles. **Detecting** and keeping track of as much motion as possible while performing physical **maneuvers** is quite a feat. **Peripheral** visual information is processed quickly. The office worker might notice the tiny **distracting** insect moving beside the computer, but the fast-moving athlete must **detect** all kinds of motion from every angle and never lose concentration. Each peripherally viewed movement must be immediately processed as more and varied movements from different sources and directions keep coming rapidly. Good footwork and body positioning will help the athlete gain viewing time in this intense environment, improving the opportunity to **anticipate** what will happen next.

The athlete's view, full of movement, requires rapid **scanning** with visual focus changing rapidly among various distances. Tracking fast objects is often **complicated** by the need for the athlete's body to move in response to other aspects of the activity, and head motion must **coordinate** with eye movement to assist in balance. A volleyball player, for example, must pay attention to body positioning in relation to the speed and angle of the moving ball as well as to the court **boundaries**, all the while **scanning** the movement of the other players. Athletes need as much peripheral **range** as possible.

The environment contributes to athletes' visual sharpness. Contrasting court backgrounds, adequate **lighting**, nonconfusing uniform color combinations, and less off-court motion all help the athlete's peripheral concentration. It seems odd that visiting baseball teams are allowed to dress in gray uniforms when bright colors would help the home team keep a better eye on them.

Everything that catches the athlete's attention causes the eyes to pause almost **indiscernibly** as they gather a quick view of focused detail. As the eyes move in and out of focus, there is a momentary blur between each pause. This is when visual tracking errors can occur. Even the act of **blinking**, usually at a rate of twenty-five blinks per minute, or one-tenth

¹BrE: centre

of a second per blink, interferes with the athlete's **vision**. Normal, natural blinking means the eyes are closed for two and half seconds out of every minute, and more than that if the athlete is anxious. This is added to the rapid **blurs** that occur as the athlete's eyes move in and out of focus on specific objects. These nonvisual moments can be somewhat compensated for if the athlete thoroughly tunes in to the game. Anticipation, a learned and practiced² art, can serve the athlete well in many ways.

Answer the questions about **Peripheral Vision in Sports**.

Questions 1-7

Do the following statements agree with the information in the reading passage?

Write

- TRUE** if the statement agrees with the information.
FALSE if the statement contradicts the information.
NOT GIVEN if there is no information on this in the passage.

- _____ 1. Peripheral vision refers to what we see near the boundaries of our visual range.
- _____ 2. Focusing our eyes on one object only will cause that object to look indistinct.
- _____ 3. In addition to physical abilities, athletes need to be skilled at detecting movements all around them.
- _____ 4. Office workers tend to find that certain kinds of movements are more distracting than others.
- _____ 5. A volleyball player does not need to focus on the movements of the other players on the court.
- _____ 6. Poor lighting and confusing color combinations on uniforms can have a negative effect on an athlete's performance.
- _____ 7. Athletes blink more often when they are feeling anxious.

History of the Circus

The circus is one of the oldest forms of entertainment in history. Although the modern circus has been around for a few **centuries**, related forms of public **entertainment** have been in existence for millennia. The animal **trainers**, clowns, and other circus performers who are familiar to us today can trace their roots to the coliseums, stadiums, and race-tracks of the **ancient** world.

The **ancient** Romans were the first to enjoy the circus. Around the sixth **century** B.C., the Circus Maximus was **founded** in Rome as a **venue** for public **entertainment**, mostly chariot races, which were a **popular** **spectator** sport. Other events held at the Circus Maximus included gladiator fights and **exhibits** of **exotic** animals such as elephants and tigers. These **entertainments** were less common than chariot races but still very popular. The original Circus Maximus **venue** was built entirely of wood. By the height of the Roman Empire, it had gone through several **renovations** and had become a **massive** marble stadium that could seat more than 200,000 **spectators**.

Chariot races continued to be held at the Circus Maximus for almost a **century** after the last **remnants** of the Roman Empire had vanished. Eventually, the site was **permanently** retired, and public entertainment was **reduced** to small **bands** of traveling¹ performers and animal **trainers**. It was during the Dark Ages that the circus began to **develop** into what we know today. The monarchs of Europe had court jesters, whose duty it was to provide amusement for the court. They combined the **talents** of jugglers, mimes, and clowns. The more common people enjoyed the performances of traveling **entertainers**, who went from village to village, putting on shows during festivals. These performers made up the medieval circus, which had little in common with the Circus Maximus other than adopting the word *circus* as its name. Leisure time was extremely rare during the Dark Ages, and people had few opportunities to enjoy circus performances. However, the circus **survived** to make a return to its former **grandeur** in the eighteenth **century**.

England was one of the first nations to embrace the modern circus. During the late 1700s, an Englishman named Philip Astley **founded** the first modern circus. He was a skilled rider who invented stunt riding on horseback. He performed his stunts in a circus ring, another of his ideas, within an indoor stadium. After his act became popular in London, he was asked by Louis XV to perform in France. He later expanded his act to include clowns, acrobats, and parades of trained animals. The last addition to his act was slapstick humor. He had horseback riders

¹BrE: travelling

pretend to fall off their horses and then go stumbling after them. Shortly after Astley's death, the circus spread to America.

During the early 1800s, the United States took to the circus quickly after learning of its popularity in Europe. Joshua Brown, an American businessman, introduced the circus tent in 1825. The use of portable tents allowed him to take his act all over the country. His traveling circus was a massive success as a business enterprise and loved by audiences everywhere. Most circuses today are variations of Brown's circus.

Uses of Leisure Time

A

Although it may seem that people are working more, studies show that we have more leisure time than ever before. Yet researchers are reporting higher levels of both stress and **obesity**. These reports appear to be a sign that we are not using our leisure time to our best advantage.

B

Health experts agree that the best way to restore body and mind is to spend time in nature pursuing a comfortable level of **physical** exercise. Spending time in natural surroundings is especially **crucial** now because, for the first time, a majority of the world's population live in cities. Recent studies show that **intellectual** function weakens as a result of the energy expended simply sorting out the **overwhelming** stimuli of city life. Tests demonstrate that people **suffer** decreases in attention span, memory, and problem-solving ability after taking a short walk on a busy city street or **merely** seeing pictures of city life. Tests also show that time spent in the city results in a decreased ability to concentrate and to control **emotions** and impulses. On the other hand, spending time in the country produces the opposite effects.

C

Unfortunately, as society becomes more centered¹ on city life, we have to **rejuvenate** ourselves in nature **deliberately** rather than as a matter of course. Yet research shows that we are not spending our leisure time **rejuvenating** ourselves. Around the world, the most popular way to spend free time is watching television. This, the most **passive** of **pastimes**, is how Americans spend more than half their leisure time. Globally, the next most popular is using the Internet, also **passive**, and it ranks as the most favored² among the billions in China. The third is shopping, which may be slightly more active but is still as far from nature as possible. Modern shopping malls remove shoppers from everything natural, leaving them to experience the outdoors only between the paved parking lot³ and the mall doors.

D

Children are most negatively affected by city life. Parents are **reluctant** to let children play freely in the city, fearing for their health and safety, and nature is something many children in the city may never have a chance to experience. Childhood **obesity** and **depression** are reaching **epidemic** levels. **Authorities** have begun to **acknowledge** the problem, and innovative programs⁴ that give children an opportunity to spend time in nature are being introduced in countries around the world.

E

Vacations⁵ are the most **obvious chunk** of leisure time. The countries with the most vacation time are Italy, with an average of forty-two days a year, and France, with thirty-seven. The **industrious** Americans have the least: thirteen days. Yet the country most satisfied with their vacations are not the Italians but the British. The British usually divide up their vacation time, taking it in pieces throughout the year rather than all at once. Of all nationalities, the British spend the most time vacationing outdoors in their national-trust parks, where they **engage** in a comfortable level of physical activity. The British report the greatest satisfaction with their leisure time. Perhaps the rest of the world would do well to follow their lead.

Reading

First Headlamps

A

Before electricity, light was **tricky** business. Flames cast limited light, are **vulnerable** to winds and weather, and can lead to **disaster**. Making fire **portable** and dependable was so difficult that lights on moving vehicles were hardly ever considered.

B

The early trains traveled¹ only during the day. The tracks were too dangerous during the dark of night, and passengers wanted to see where they were traveling anyway. In the late 1830s, railroad traffic became heavy enough for **freight** trains to delay passenger trains. To avoid these delays, railroads started running **freight** trains at night. Horatio Allen's 1831 **innovation**, the "Track **illuminator**," was suddenly in demand. It was a pile of pine **knots** burning in an iron grate that sat in a box of sand on a platform car. The car was pushed ahead of the **locomotive**. The **illuminator** did not **cast** much light, but it warned of the approaching train and was the best technology available.

C

In 1841, some trains used an oil² lamp backed by a curved **reflector**, an improvement, but oil lamps blew out easily in the wind, including the wind **generated** by the movement of the train. At about the same time, Schenectady and Troy Railroad trains **displayed** a whale oil lamp positioned between a reflector and a lens about twelve inches high; it threw light up to 100 feet ahead of the train. Although this was an improvement, the braking distance the trains required was more than the 100 feet of track that were illuminated. In 1849, a calcium lamp was developed that threw light 1,000 feet and lasted four hours; however, the only railroad company to use it was Camden and Amboy. Limelights, which were used to light theater³ stages on both sides of the Atlantic, were considered too **intense** for trains. Eventually, acetylene, which did not extinguish in the wind, replaced oil in headlamps.

D

In 1851, the first electric headlamp was developed. This headlamp had two major **drawbacks**: It required its own generator, which did not become **portable** until the 1890s when steam generators became common, and the delicate parts broke easily as a result of the rough rails over which the trains traveled. Russia ran the first train **equipped** with

¹BrE: travelled

²BrE: kerosene

³BrE: theatre

a battery-powered electric headlamp. The French first used steam generators to power electric headlamps on trains. In the United States in 1897, George C. Pyle developed an **efficient** electric headlamp. By 1916, federal law required trains to have electric headlamps.

E

Automobiles, the exciting new **mode** of transportation⁴ at that time, needed headlamps, too. The requirements for car headlamps were more **stringent** than those for trains: Because roads were even rougher than rails, cars required more **rugged** parts, and the steam generators had to be smaller than those in trains. Despite these tougher requirements, the Columbia Electric Car was **equipped** with electric headlamps in 1898.

F

Electric headlamps made travel at all hours and in almost all weather possible, something we take for granted today.

Answer the questions about **First Headlamps**.

Reading

Major Subways of Europe

Public transportation¹ is an **intrinsic** part of every modern city. Many big cities have an **underground** rail system as their **centerpiece**. Three of the biggest and busiest **underground** rail systems in Europe are in London, Paris, and Moscow. The character of each city imprints its railways.

The first of these subways was London's **Underground**, which opened in 1863. By that time, horses and **pedestrians** had so **clogged** the streets of London that city government ruled that no railroads could enter the city except **underground**. The method used for laying the first underground tracks is called "cut and cover," meaning the streets were dug up, the track was laid, a tunnel was built, and then everything was buried. Although the method was **disruptive**, it worked. Steam engines chugged under London, **releasing** steam through **vents** along the city streets. In its initial day of **operation**, the London **Underground** carried 30,000 passengers.

This cut-and-cover method caused massive disruptions in the city and required the **destruction** of the structures above the tunnel. A better means of **expanding** the original **Underground** was needed, and builders did not have to look far to find it. London was also home to the first underwater tunnel, a **pedestrian** tunnel that had been built under the Thames River in 1825, made possible by the engineer Marc Brunel. He had devised a way of supporting the tunnel while the workers dug, called the Brunel **Shield**. Two young engineers improved the Brunel **Shield** for use in **expanding** the London Underground. The new Harlow-Greathead **Shield** carved a circular tube more than seven feet in diameter, which is why the London Underground is called the Tube. By then, the tunnels could be deeper than the original ones because electric train engines had become available. These trains did not have to be close to the **surface** to **release** steam. The **shield** could be used to dig deeper tunnels without destroying the **surface** structures above them.

Paris started designing an underground rail service to **rival** London's. The first part of its system was not opened until the World's Fair and Olympics were held in that city in 1900. The Paris Metro is shorter than London's, but it carries more passengers every day, second in Europe only to Moscow. Whereas London's Underground is known for its engineering, Paris's Metro is known for its beauty. The stations and entrances are examples of art nouveau **architecture**, and they are **decorated** with mosaics, sculptures, paintings, and innovative doors and walls.

The Moscow Metro opened in 1935. It was based on the design of the London Tube, except much of the track is above ground. When Stalin

¹BrE: transport

came to power, he used the stations as **showcases** of Russian art, culture, and engineering. The underground Moscow stations are filled with statuary, painting, and mosaics.

Underground railways are not only for transportation. During World War II, all three underground systems were used as bomb shelters for the populace. The Moscow subway was even used as a military **headquarters**. Stores and malls have **sprung** up by stations, something that is especially convenient in cold climates.

All three systems are continuing to expand, providing service to more riders in more distant locales. This is all part of an effort to decrease greenhouse gases emitted from personal vehicles.

Electric Cars Around the Globe

Cars have reshaped our world since they first rolled off mass-production lines in the early twentieth century. One- and two-thousand-year-old Roman roads have been replaced by highways. Longer and wider bridges **span** rivers. The sharp division between **urban** and **rural** landscapes has been replaced by **suburban sprawl**, town and country linked by eight-lane expressways with stop-and-go traffic. Gas¹ stations are everywhere. Countries with oil reserves are enormously rich and powerful. After a century, the romance with internal combustion engines is on the wane. As the price of oil rises, the reserves of irreplaceable oil are **consumed**, and exhaust **fumes hamper** life in **urban** areas, alternatives to gas-powered vehicles are becoming more attractive.

In the early twentieth century in North America, electric cars shared the roads with gas-fueled cars, but after a short time, gas-fueled cars became the **standard**. Although electric cars were quieter, cleaner, and easier to start, they were not able to travel the required distances, and their **plodding** speed failed to capture the imagination.

Lately, in Europe and in Asia, where commuting distances are shorter and gas is more expensive than in the United States, electric cars have grown in popularity. Electric recharging stations are appearing in cities. The government of China has offered **monetary incentives** to car manufacturers for each electric car they manufacture as well as to the people who purchase the electric cars. Taxi drivers in Tokyo have **embraced** electric vehicles. Major car manufacturers, including Mitsubishi, Nissan, Toyota, and Mercedes Benz, all offer electric cars everywhere but in North America.

In North America, slow, short-ranged electric vehicles with a high initial cost have thus far appealed to a limited audience. An American electric car that **appeared** briefly in the 1990s had a cruising speed of twenty-five miles per hour and could travel eighty-five miles on a single **charge**. Since then, battery technology has improved **markedly**. More recently, a North American company introduced an electric sports car that can travel 300 miles on a single **charge** and **accelerate** from 0 to 60 mph in 3.7 seconds, similar to the best sports car. The hope is that North Americans will **embrace** the new technology when they see an electric car as **appealing** as a conventional sports car.

Other American auto manufacturers are marketing electric cars as they do in Europe, as **commuter** cars. The design of many of these cars is innovative: Some are made of light composites and seat only two

¹BrE: Petrol

people. One is a three-wheeler that is **classified** as a motorcycle. Another electric car, the Tango, is five inches narrower than a large motorcycle and seats two, one behind the other. Four of these vehicles fit in a single parking space. The vehicle is marketed as a great way to drive between lanes of stopped traffic.

All electric cars will help to reduce exhaust and greenhouse gases; some will do it with greater **flair** than others.

Answer the questions about **Electric Cars Around the Globe**.

Cars have had enormous effects on the way our world looks. The landscape is now covered with highways and big bridges. New **1**..... neighborhoods have developed between the cities and the rural areas. Cars are also causing serious problems. In the early days, both electric and gas-powered cars were common, but people felt that electric cars did not have the flair that gas-powered cars had. For example, electric cars traveled at a more **4**..... speed. Gas-powered cars became more popular, and now they are the **5**..... . However, there is a renewed interest in electric cars, and they have been **6**..... by people in many countries around the world. Manufacturers are developing electric cars to sell to **7**..... in both Europe and North America, because these cars are a good way to get to work.

Origins of Writing

Ancient **civilizations** attributed the origins of writing to the gods. For the ancient Egyptians, their god Thoth was the **creator** of writing and, in some stories, also the creator of speech. The ancient Sumerians and Assyrians also believed that writing originated with certain gods, as did the ancient Maya. In Chinese **mythology**, the creation of writing is **attributed** to an ancient sage and was used for communication with the gods. Clearly, writing was highly valued even by ancient peoples.

Humans began painting pictures on cave walls 25,000 years ago or more, but writing systems did not develop until groups of people began **settling** in farming communities. Scholars say that writing systems developed independently in at least three different parts of the world: Mesopotamia, China, and Mesoamerica.

The oldest known writing system developed among the ancient Sumerians in Mesopotamia around 3000 B.C. Along with the rise of agricultural societies came the development of **property** ownership and the need to keep records of it. In early **agricultural** societies, **property** consisted largely of land, livestock such as cattle, and grain. Originally, clay tokens of various shapes were used to count these possessions. From this developed a system of impressing the shapes onto clay **tablets**. One of the earliest clay **tablets** of this type was found in **excavations** in Mesopotamia and dates from the time of the Sumerian culture. Scribes then began using reeds instead of **tokens** to mark the clay, developing a system of wedge-like shapes to represent the tokens. This system of writing using wedge shapes is known as cuneiform. It was later **adopted** by other cultures and became the basis for other writing systems. Originating in a system that used pictures to represent objects, cuneiform writing eventually developed into systems that used symbols to represent the sounds of language.

The oldest form of Chinese writing dates from around 1500 B.C. It is called oracle bone script because it was **carved** on animal bones and shells that were used for predicting the future. At a later period, Chinese writing appeared on bronze vases and later still developed into a system that was used to record government affairs. The Chinese writing system was also the original basis for both the Japanese and Korean writing systems.

In Mesoamerica, a region that **encompasses** parts of Mexico and Central America, it is the ancient Mayans who are famous for the writing they **inscribed** on temple walls and other religious **structures**. However, **scholars** believe that writing in that part of the world may have begun

before the rise of the Mayan **civilization**. The Zapotec culture, centered¹ on Oaxaca, Mexico, was already using writing around 400 B.C., or possibly earlier. The Olmec culture may have developed a writing system even earlier than that. Recent discoveries show that the Mayans may have begun writing around 2,300 years ago. They used a system of symbols that represented words and syllables to record information about the **deeds** of their rulers as well as information connected to their calendar and astronomy. Their system of writing survived until the time of the Spanish Conquest in the 1500s.

In ancient times, only **specialized**² people such as **scholars**, priests, or government officials used writing. Today, close to three-quarters of the world's adult population can read and write, and **literacy** is considered a basic skill necessary to **function** in the modern world.

Hula Dancing in Hawaiian Culture

Many people dream of visiting the beautiful Hawaiian Islands. Mention of this Pacific paradise **evokes images** of women in grass skirts **swaying** their hips as they perform **graceful** island dances for the **benefit** of tourists. Although this **image** is a common **stereotype** of Hawaii, it has its roots in a real **tradition** that continues to play an important role in Hawaiian culture.

Hula dancing has always been part of Hawaiian life. Hawaiian mythology includes various stories that explain the origins of hula, each story attributing its creation to a different god or goddess and its first appearance to a different location. In reality, hula dancing is such an ancient **tradition** that it is impossible to say when or where it first appeared. It was most likely originally performed in front of an **altar** in honor of gods and **accompanied** by great **ritual**. It is a common belief that the ancient hula was danced only by men, but some scholars point to **evidence** suggesting that hula was traditionally danced by both men and women.

The English explorer Captain James Cook's visit to the islands in the eighteenth century caused many changes to Hawaiian society as a result of the contact with European culture. Although hula did not completely disappear after contact, it was **discouraged**. King David Kalakaua is credited with **reviving** hula dancing during his **reign** in the late nineteenth century. He was interested in reestablishing lost traditions, and hula was performed at **celebrations** held in his honor¹.

In the 1960s, a Hawaiian cultural festival was established as part of an effort to attract more tourists to the islands. A major part of this festival consisted of hula competitions, which were organized into categories of *hula kahiko*, or hula danced in the ancient style, and *hula auana*, or modern hula. This festival, called the Merrie Monarch Festival in honor of King David Kalakaua, has become a major annual cultural event. The hula competition is a central part of the festival and has had a **significant influence** on modern hula dancing.

Hula continues to be danced in both the ancient and modern styles. Traditional hula is an **energetic** dance performed to the accompaniment of chants and the beating of drums. The dancers wear traditional costumes consisting of **garlands** of leaves, skirts of tapa (a type of bark), and anklets made of animal bone. Many of the movements of modern hula are based on the ancient hula, but the modern style is slower and more **graceful**. It is danced to flowing guitar and ukulele music, and the dancers wear **elaborate** costumes, including the famous Hawaiian **floral** garlands known as leis.

¹BrE: honour

Hula has attracted the interest of people outside the islands, and hula schools can be found in many parts of the world. Although people of other nationalities learn to dance some form of hula, it is also danced by Hawaiians who live away from the islands, on the mainland United States, in Europe, and elsewhere. It has become a way for native Hawaiians to maintain their cultural identity even while living away from their island homeland. What was once a religious ritual has become a form of entertainment, not only for tourists, but also for native Hawaiians who seek to maintain connections with their cultural heritage.

The Art of Mime

Miming dates back to the theaters¹ of ancient Greece and Rome. Mimes use movements, **gestures**, and facial expressions to **portray** a character or an emotion or to tell a story—all without words. Over the centuries, the art of miming grew to include acrobatics, **props**, and costumes, **culminating** in the fine-tuned art form that people **recognize**² today.

Miming can be **abstract**, **literal**, or a combination of the two. **Abstract** miming usually has no plot or central character but simply expresses a feeling such as sorrow or desire. **Literal** miming, on the other hand, tells a story and is often comedic, using body **gestures** and facial expressions to present a **main** character facing some type of **conflict** in a **humorous** way, for example, acting out a tug-of-war without the aid of rope or other props.

The twentieth-century style of miming reflects outside influences of the period, most notably silent films, in which actors relied on their ability to communicate thoughts and stories through facial expressions and **exaggerated gestures**. Two superstars of the silent movie era, Buster Keaton and Charlie Chaplin, **sharpened** their miming skills in the theater before using them in movies. Both were so successful that they have continued to influence mimes and other live performers long after their deaths. People still consider Chaplin a master of the miming technique, in particular, his tragicomic “little tramp” character, who so **effectively portrays** human **frailty** through physical comedy, also known as slapstick.

Another twentieth-century influence on modern miming involves a **renowned** French mime and acting teacher named Etienne Decroux, who developed what was known as corporeal mime. This art form focused on the body, showing thought through movement, and became the **prominent** form of the modern mime era. In the 1930s, Decroux founded a mime school in Paris based on corporeal mime. One of his students, a young Frenchman named Marcel Marceau, **emerged** as what many consider the master of modern mime.

Marceau added his personal touch to the art of miming and presented it to the world for half a century on television and in theaters. Among his well-known **illusions** are portrayals of a man walking against the wind and a man trapped inside a shrinking box. Marceau also created his own special character, Bip the clown. White-faced and dressed in a striped shirt and floppy top hat with a red flower, Bip is **reminiscent** of both Chaplin's little tramp and Pierrot, the traditional downtrodden mime character from centuries earlier.

Miming is still taught in dance, drama, and acting schools worldwide, although it has changed **considerably** since the ancient Greek plays and even since the solo performances of Marceau. Group miming is now in fashion, and sounds, lighting, and other special effects are included to help create the desired **atmosphere**. Current examples include the U.S. dance troupe Pilobolus, which **merges** modern dance, acrobatics, gymnastics, and mime to create elaborate geometric shapes with their bodies, and the Canadian Cirque du Soleil, which uses lighting, spectacular costumes, and special effects to produce **striking illusions**.

Nurse Migration

There are more nurses today than at any time in history, yet a global nursing **shortage** threatens to **cripple** health care systems worldwide. Because the underlying causes are **complex** and vary in different regions, a simple, short-term fix will not remedy the situation.

In developing nations—particularly in sub-Saharan Africa, South Asia, and Latin America—a major reason for the **shortage** is nurse migration to developed countries in Europe and North America as well as Australia to help fill **vacancies** there.

Nurse migration is hardly a recent phenomenon. The Philippines have for years trained many more nurses than the country needs, with thousands working **abroad** and sending money to relatives back home (nearing \$1 billion annually). From that **standpoint**, migration of nurses from poorer to wealthier countries would appear to benefit all involved. But there is another side to the story. Today, even the Philippines feels the effects of the nursing **shortage**, with nurses continuing to migrate **abroad** while positions at home go unfilled.

Lured by the higher salaries and better quality of life available in wealthier countries, nurses from developing countries frequently leave behind already overburdened health care systems, where nurses are often the **primary** caregivers because doctors, too, are in short **supply**. Conditions then deteriorate further as the nurse-to-population ratio **declines**, a number that is **estimated** to be ten times higher in European than in African countries. Some Latin American countries are experiencing such a **shortage** of nurses that doctors actually outnumber them, leaving the **bulk** of health care up to assistant nurses, who have only **rudimentary** training.

Routine immunizations and prenatal care fall victim to the nursing **shortage** in developing countries, and in many cases the results can be life threatening. In African countries where the HIV/AIDS **epidemic** is **ram-pant**, some patients go untreated not because lifesaving drugs are unavailable but because there are not enough nurses to **administer** them.

In developed countries in Europe and North America, the nursing **shortage** largely **stems** from an aging population, who require more health care services, coupled with a dwindling **supply** of nurses, many of whom are likewise nearing retirement age, with fewer young people preparing to replace them.

A common thread among nurse-importing countries—underinvest-ment in nursing education dating back two or more **decades**—has pre-vented them from creating a stable workforce to meet current and future

needs. The United Kingdom, for **example**, still feels the effects of a cut-back in nurse training some twenty years ago. In the United States, nursing schools turn down thousands of qualified applicants every year because of their own **shortages** of nursing faculty. Developed countries need to invest in nursing education and focus on **retaining** and rewarding nurses appropriately, both financially and through high-quality working conditions.

Widespread nurse migration helps neither the host country nor the country of origin in the long run, does nothing to remedy the underlying cause of the **shortage**, and results in millions of people being deprived of the health care they need.

Answer the questions about **Nurse Migration**.

Reading

Aerobic Exercise and Brain Health

The disease-fighting, weight-controlling benefits of physical exercise, especially **aerobic** exercise, have long been known. Now, researchers have discovered another advantage: Physical exercise has a powerful effect on brain health, and the benefits go beyond the release of endorphins, the chemical in the brain that improves **mood**. Exercise affects the brain's plasticity—that is, its ability to reorganize¹ itself—and can reduce the age-associated loss of brain tissue that decreases **cognition** in the elderly and in those who have **disorders** such as Alzheimer's disease.

Recent studies have found that exercise activates a number of factors in the brain, including a protein known as *brain-derived neurotrophic factor* (BDNF), that **stimulate** the growth and development of brain cells. BDNF **regulates** the production of synapses, the connections between neurons that are essential for transmitting signals from one nerve cell to the next, and may also be involved in producing new nerve cells. Using **rodent** models, researchers found increased **concentrations** of BDNF in the hippocampus, an area of the brain involved in learning and memory and associated with **dementia**, after only one week of regular exercise. A study in older humans found a correlation between **aerobic** fitness, the size of the hippocampus, and performance on **spatial** memory tests. Other human studies noted that **aerobic** exercise increased the volume of gray² matter in some parts of the brain.

Regular exercise can help **stave off** some effects of normal aging and delay or diminish the **gravity** of conditions such as Alzheimer's disease, depression, and multiple sclerosis. Even over a relatively short time, exercise can repair some of the loss in brain **capacity** associated with aging. The **greatest** effects have been found in processes such as decision-making. **Aerobic** exercise can also improve short-term memory in the elderly. Exercise has been found to lower the risk of Alzheimer's disease in mice by decreasing the buildup of a protein known as beta-amyloid, which forms the brain plaques that precede Alzheimer's. The mice also outperformed nonexercising mice in a memory test. In a study of multiple sclerosis patients, those who exercised regularly fared better than those who exercised less. The exercise group scored better on tests of cognitive function, and their brain scans showed less **deterioration** and more gray matter.

In addition to increasing brainpower, exercise can help relieve depression. Although it is well known that endorphins help relieve stress and

¹BrE: reorganise

²BrE: grey

reduce anxiety and depression, BDNF plays a role as well. Human studies have shown that people who have received a **diagnosis** of major depression typically have lower concentrations of BDNF in their blood. Animal studies **indicate** that corticosteroids, which the body produces in response to stress, decrease the availability of BDNF in the hippocampus. Exercise can **counteract** this effect. Exercise also lessens depression by increasing blood flow to the brain.

The **link** between aerobic exercise and improved brain function in the elderly and in people with **impaired cognition** could lead to new ways to prevent and treat brain disorders. Meanwhile, people may have more control over their own brain health than was **previously** believed.

How Drugs Are Studied

A

It takes years, and sometimes decades, for a drug to move from the **theoretical** stage to the pharmacy shelf. Of the thousands of drugs under **investigation** at any one time, only a small **fraction** will produce the desired result without unacceptable side effects.

B

First, scientists **target** a step in the disease process where they believe a drug can have an effect. Then they **manufacture** compounds or take them from organisms such as viruses and fungi and test them in laboratory **cultures**. Once scientists isolate a chemical that produces a **desirable** effect, they analyze¹ its structure and alter it as necessary to **enhance** the outcome.

C

The next step involves testing the drug in animals. Scientists look at how much drug is **absorbed** into the bloodstream, how it distributes to different organs, how quickly it is excreted or leaves the body, and whether it has any **toxic** effects or by-products. Researchers usually test at least two animal species because the same drug may affect species differently.

D

If a chemical passes laboratory and animal testing and is **deemed** appropriate to analyze in human volunteers, it is ready for clinical trials. Researchers follow a protocol that describes who may participate in the study, tests and procedures to follow, the length of the study, and **outcomes** to be measured. Drug trials may focus on treating a disease, preventing a disease from occurring or **recurring**, or **enhancing** the quality of life for people living with incurable, **chronic** conditions.

E

There are four phases of clinical trials; the first three phases study whether the drug is effective and can be safely administered to patients, and the fourth phase evaluates long-term safety and use once a drug is on the market.

F

Phase I clinical trials test a drug in small groups of healthy volunteers (fewer than 100) to **ascertain** its safety and the appropriate dose range. These studies last for six months to one year.

¹BrE: analyse

G

Phase II clinical trials test several hundred volunteers to determine how effectively the drug **combats** the disease being studied. These trials continue to evaluate safety, side effects, and optimal dose. Phase II studies also last for six months to one year.

H

Phase III trials test thousands of volunteers for several years, with researchers closely **monitoring** study participants at regular **intervals**. These studies typically compare the drug under **investigation** with a control: either a drug known to cure or **alleviate** a specific disease or, if one does not exist, a **substance** that has no medicinal effects, known as a placebo. Phase III trials are typically blind studies (participants do not know which drug they are receiving) or double-blind studies (neither participants nor researchers know which drug an individual is receiving until the trial is completed).

I

Once a drug passes the first three phases and is found to be safe and effective, drug companies may apply for the right to market the product. After a drug is approved and on the market, Phase IV trials may investigate longer-term effects, effects in different groups of patients such as the elderly, or use of the medication for a different condition such as using a cancer drug to treat AIDS.

Which paragraph discusses the following information?
Write the correct letter, A-I.*

- _____ 1. Drug tests that involve growing biological material in a laboratory
- _____ 2. Investigations of the effects of drugs on animals
- _____ 3. Studies to determine how safe a drug is and how much a patient should take
- _____ 4. Studies to monitor how well a drug fights a disease

Questions 5-7

Choose the correct letter, **A**, **B**, **C**, or **D**.

5. Drug tests on animals look at
 - A** how the drug is absorbed by the body.
 - B** how effective the drug is for chronic conditions.
 - C** how well the drug prevents a disease from recurring.
 - D** how quickly the drug alleviates the disease.

6. During Phase II clinical trials, study participants are monitored for
 - A** chronic conditions.
 - B** toxic doses.
 - C** speed of cure.
 - D** possible side effects.

7. After a drug is deemed safe and effective, a drug company may do further tests to ascertain
 - A** the best way to market it.
 - B** possible effects over time.
 - C** how it compares with other drugs.
 - D** the best group of people to use it.

Hiking the Inca Trail

Sitting high in the Andes Mountains in Peru, the ancient ruins of Machu Picchu have captured the **imagination**s of travelers¹ ever since they were rediscovered by **archeologist** Hiram Bingham in 1911. The name Machu Picchu means “old peak” in the **native** Incan language, and the **site** had probably been considered a sacred place since long before the ancient Incas arrived there. The Incas built a **ceremonial** city on the site that included palaces, temples, storage rooms, baths, and houses, all **constructed** from heavy blocks of granite fitted **precisely** together. Although little is known about the activities that took place in the ancient city, it appears that one of its functions was as an astronomical observatory. The so-called Intihuatana stone, located at the **site**, was used to mark the autumn and spring equinoxes as well as other astronomical events.

The **spectacular** natural setting, the wonders of architectural and engineering skills embodied in the well-preserved buildings, and the **mysteries** of the ancient culture **draw** thousands of tourists from around the world every year. The nearest city is Cuzco, about thirty miles away. From there, tourists can take trains and buses to the ruins. A popular route for the more **adventurous** is to hike along the Inca Trail. The ancient Inca created a **network** of trails throughout the mountains, some of which are still in existence. The Inca Trail to Machu Picchu, used by hikers today, was likely considered a sacred route in its time, used by travelers making pilgrimages to that **ceremonial** site.

Although the Inca Trail leads to the wonders of Machu Picchu, it offers many **marvels** of its own. Hikers are treated to magnificent views of glacier-covered peaks above and tropical valleys below in their journey over high mountain passes. Many species of orchids can be seen, as well as all kinds of birds, from tiny hummingbirds to the splendid Andean condor. The Inca Trail also passes by ruins of other **ceremonial sites** on the way to the grand destination of Machu Picchu.

Tourists have been hiking the Inca Trail since the early part of the twentieth century, and for much of that time there were no regulations. Hikers could travel when they pleased and camp wherever they chose. However, the trip has become so popular that in 2005, the Peruvian government **instituted** a set of **restrictions** on the use of the trail. To protect the natural environment and **preserve** the ruins, no more than 500 people a day are allowed to enter the trail. Because each group that sets out includes guides and porters, the number of tourists entering the trail

¹BrE: travellers

each day is probably closer to 200. In addition, both tour companies and individual guides must be licensed. There are also legal requirements that **pertain** to the minimum wage that porters must be paid as well as the maximum weight load they can be required to carry. Fees for trail use help pay for upkeep of the trail and the ruins. All these regulations and fees combine for a more expensive trip, and this has made it a **luxury accessible** to fewer people. The **upside** is that the environment and the workers are protected.

What Is Ecotourism?

The **concept** of ecotourism has been gaining **publicity** over the past couple of decades. It arose out of the “green movement”—a growing interest in developing practices in all aspects of daily life that preserve rather than **injure** the natural environment. Ecotourists **str ve** to have minimal impact on the places they visit, in terms of both the local ecology and the local culture. Some followers take the **concept** even further and define ecotourism as travel that aims not only to **avoid** harming the environment, but also to make a positive contribution to the local ecology and culture.

The types of vacations¹ that fit into the **category** of ecotourism vary widely. Ecotourism might involve travel to a natural **destination** such as a national park or a nature preserve to learn about the natural environment and, in some cases, to **volunteer** on environmental protection projects. It could be a few weeks spent with local artisans learning how to do a traditional craft. Trips that involve hiking or rafting through **w lder-ness** areas with no regard for the natural habitats one passes through would not be included in the definition of ecotourism. Neither, of course, would be trips with a focus on hunting.

Ecotourists seek out **accommodations** that follow environmentally friendly practices such as using renewable resources and **recycling**. Ecotourists look for hotels and tour companies that hire mainly local staff, keeping tourist dollars within the local economy. Ecotourists might choose to join a bicycling or walking tour rather than a bus tour that adds to air pollution and allows tourists to see the local area only through a **bartier** of glass windows.

Ecotourists often shun cruise ships, because these are among the biggest **culprits** in the tourism industry in terms of environmental pollution. Massive cruise ships release large quantities of harmful emissions into the air as well as pollute the waters they sail through with fuel from their engines. The huge numbers of passengers on these ships generate many tons of garbage and wastewater, which is often **dumped** into the sea. Cruise ships also cause damage to coral reefs and other **delicate** ecosystems that they travel near. Perhaps in part because of the growing interest in ecotourism, some cruise companies are now making an effort to be more environmentally friendly. These efforts include **recy- cing** wastes and using fuel more efficiently. Vacationers who are interested in ecotourism and still get **pleasure** from cruises can travel with cruise companies that follow these **practices**.

¹BrE: holidays

Because of the growing interest in ecotourism, many companies advertise themselves as ecotourism companies, especially those that offer trips to **remote**, natural areas, the type of destination that ecotourists favor². Travelers need to be **wary** and do their research carefully. Not all of these companies follow the principles of ecotourism. Some are simply trying to take advantage of the current interest in this type of travel. The positive side of this, however, is that it may actually be an indication that the movement is gaining in popularity.

Learning Vacations

A couple spends a week in Thailand learning to cook in the local style. A group flies to Turkey to join an **ongoing** archeological¹ dig for the summer. A history professor leads a tour of historical sites of Europe.

The participants in these trips are all enjoying a different kind of travel: **learning vacations**². Rather than spending their vacations relaxing on a beach or taking a bus³ tour of ten cities in eight days, they have opted to enjoy their time off by **learning** something new. From attending summer camps for adults to studying botany in the rain forest, people everywhere are experiencing the value of a vacation with a purpose. According to **surveys**, close to one-third of travelers⁴ each year choose learning programs over other types of vacations, and their numbers are growing.

In the past, these types of vacations were generally considered to be for young people still in school. A student of French might spend the summer studying that language in Paris. A marine biology major could learn to scuba dive and spend a few months at sea assisting researchers. Now, it has become common for adults, too, to spend their vacation time in educational **endeavors**, and various types of travel programs⁵ have grown up around this interest.

Art schools and writing programs **sponsor** trips to interesting parts of the world. Trip participants **hone** their creative skills under the **supervision** of professional artists and writers while at the same time enjoying, for example, the warm **breezes** of the Caribbean islands or the **colorful** villages of Spain. Cooking is a popular hobby, and tour companies have developed trips that focus on the **cuisine** of different regions of the world. Travelers may learn all about how traditional meals are prepared and what **ingredients** are used. Or, for those who want to improve their abilities in the kitchen, they may actually receive hands-on lessons, **acquiring** new skills that they can take home with them. Travelers to Britain can **enroll** in courses at any of the twenty-plus adult **residential** colleges around the country. The courses at these schools generally last just a few days and range in **content** from activities such as photography and dancing to more serious subjects such as history, philosophy, and literature.

These are just a few examples of the many types of learning vacations that people enjoy every year. In addition to gaining knowledge and skills, another advantage of these types of vacations is that they can be more **economical** than traditional vacations. Camping out near an archeological site or sleeping in a college dormitory or youth hostel certainly costs less than staying at a luxury hotel or vacation **resort**. And the fact that many of these trips can be organized⁶ by the travelers themselves without the services of a tour company or travel agency makes them even more **economical**. Of course, it all depends on the type of trip one chooses, and some companies offer learning vacations to exotic locales with expert professionals that are quite **costly**. With the **broad** range of possibilities available, there are options to suit all **tastes** and **budgets**.

What Makes a Small Business Successful?

The U.S. Small Business Administration (SBA) defines small businesses as those employing fewer than 500 employees, and many are much smaller than that. In the United States, about a third of small businesses employ fewer than twenty employees. Many thousands of new small businesses are started every year, but few survive. In fact, according to the SBA, one in three fails during the first two years, and only one in two survives beyond five years.

People start small businesses for a variety of reasons, but whatever the particular motivation, certain characteristics make a small business more likely to succeed. Business advisers point to the importance of finding a niche. It is difficult for a small business to compete with the array of products or services a large business can offer. Instead, the small business that has defined what is unique about the product or service it provides has a greater chance of success. A small business can offer customers personalized service and specialized products or knowledge that can be more difficult to find in a large chain store, for example.

Related to the concept of finding a niche is the importance of maintaining a competitive edge. To be successful, a business has to look at what its competitors, whether large or small, are doing and find a way to stay ahead of the game. In addition to offering a specialized product or service, a business that has more efficient production or distribution systems, a better location, or a reputation for excellence in customer service can do well in a competitive market.

Research and planning are vital steps in setting up a small business. It is essential to determine who the potential customers are and the best way to reach them. It is also necessary to develop a sound business plan that, among other things, shows how the business will make a profit and projects the cash flow that will help the business stay afloat.

Naturally, a successful small business starts out with proper financial support. In addition to the costs of starting the business, there are also the costs of running it until it starts turning a profit. Typically, a small business takes one to two years to become profitable. During that time, there are still expenses that have to be met. Rent has to be paid, employees have to be paid their wages, and supplies have to be bought. If plans have not been made for supporting the costs of the business until it brings in a profit, inevitably it will fail.

One important tip is to start small. This allows owners the opportunity to learn little by little without making huge costly mistakes. Working alone in one's basement during the initial phases of the business, for

example, costs a great deal less than renting a space and hiring staff. If the business generates less income than expected or if the market needs to be redefined, the **financial** losses will be much less if expenses have been kept to a minimum.

About half of private-sector employees in the United States work for small businesses. This number is even greater in other parts of the world. Successful small businesses make important contributions to the economy everywhere.

Brand Loyalty

From the neighborhood¹ barber to the international conglomerate, most businesses have a common goal: repeat customers. Developing a committed clientele can be more valuable than attracting new customers, whose loyalty to a company's products may be fleeting.

Brand loyalty is a psychological bond that, once established, is difficult to reverse—and it is more complicated than simply buying the same product time and again. True brand loyalty differs from what some marketing researchers refer to as spurious loyalty—a passive type of buying motivated by habit, convenience, price, and availability but not the result of any true loyalty or passion for the actual merchandise. Convincing consumers with spurious loyalty to try another brand can be quite easy.

Products that create true consumer loyalty tend to be nonessential day-to-day items such as tobacco, beverages, candy, and beauty products, as well as luxury purchases such as designer clothes and cars. Household staples such as milk, eggs, sugar, and paper products create little brand loyalty, with most consumers just as likely to purchase private labels or store brands or whatever is on sale.

A product must have acceptable quality to establish true brand loyalty, but even top quality is not enough on its own to forge a strong connection with a consumer. Customers relate to products for emotional and symbolic reasons. People identify with the image associated with a brand, for example, as a result of a celebrity endorsement or because of the social values of the company. In addition, people consistently purchase pricey items because of the perceived status those items confer.

Brand-loyal consumers are unlikely to defect to the competition because loyal consumers develop a preference for a product, ignore negative associations, and believe it outperforms others, even when there is little difference among brands. For example, beverage drinkers in blind taste tests regularly fail to select their favored brand—even though they mention taste as the primary reason for their loyalty.

Brand loyalty is a worldwide phenomenon, but it is a luxury that prevails where people have more money to spend. In China's burgeoning economy, sales are soaring for certain top-of-the-line luxury cars after concerted efforts were made to promote them. At the same time, European fashion companies are taking advantage of Chinese consumers' thirst for designer labels, selling goods worth billions of U.S. dollars a year.

Consumers become less selective about brands in economic downturns. During the recession of the early-twenty-first century, more con-

¹BrE: neighbourhood

sumers in Europe and North America turned to **brands** that cost less instead of the ones they preferred, and more retailers packaged goods under their own private labels. Although private labels are also influencing shoppers in South Africa and Japan, they have had little effect in Hong Kong, where people have more disposable income and therefore remain loyal to the higher-priced brands.

Brand loyalty is less prevalent in poorer countries where consumers have fewer choices and price is usually the priority.

Answer the questions about **Brand Loyalty**.

Global Outsourcing

Outsourcing, subcontracting work to another company, has always been a part of doing business. **Firms** hire other **firms** to do work they cannot do themselves or can have done more cheaply elsewhere. With today's global economy, the practice is now so prevalent that even companies in the business of outsourcing are outsourcing work to others.

Wealthy nations **routinely** send all types of work to countries where labor costs are cheaper, but currently the most frequently outsourced jobs are in information technology (IT), software, and customer service. Japan, Western European countries, and the United States outsource the most work, and India and China take in the most.

Language skills are a **decisive** factor in where work is sent, with India and the Philippines serving English-speaking clients, Argentina working with Spain, Mexico serving Spanish speakers in the United States, and China handling Asian languages such as Mandarin, Cantonese, and Korean. As a **preponderance** of corporations conduct business in English, the bulk of outsourcing jobs in recent decades have gone to India, where its status as a former British colony resulted in millions of people speaking English as their first language. About half of India's outsourcing work comes from the United States, with about a quarter from European countries and the **remainder** from countries such as Japan and Australia.

Some of the largest outsourcing firms in the world have headquarters in India. However, **confronted** with increasing demand, a **looming** shortage of skilled workers, and rising wages at home as the Indian economy grows, some of those outsourcing companies are now turning to other countries to help meet their own staffing needs. They outsource largely to China but also to dozens of other countries, including the Philippines, Mexico, Brazil, Saudi Arabia, and, in some cases, the country where the work originated. For example, a U.S.-based software company might outsource IT support to a company based in India, which then subcontracts part of the work to a company in the United States.

Much of the IT support market is now moving to China, where a vast supply of highly trained people are willing to work for lower wages than people in India. With newer Chinese companies not yet well established in the outsourcing business, Indian firms are opening **branches** there, where their knowledge of English and well-developed managerial skills give them an advantage, at least for now, in dealing with international clients.

Outsourcing has long been a source of **controversy**, with **opponents pointing** to the loss of jobs and damage to the economy in the home country and **proponents** viewing the savings in labor costs as a **boon** to business. The receiving countries generally consider the well-paying jobs a benefit to their economy, but employees are not always happy with the

work. Staff **turnover** can be high when employees have to work long night **shifts** to **coincide** with the business day in the outsourcing country.

India remains the outsourcing **epicenter** for now, with China slowly **catching up**, but the situation will continue to change. Once wages rise high enough in India and China, foreign workers somewhere else will be as **enticing** to outsourcing countries as India and China now are to Europe, Japan, and the United States.

Answer the questions about **Global Outsourcing**.

Questions 1-7

Complete the summary using words from the list below.

Outsourcing is very common in today's global economy. A preponderance of companies in **1**..... nations send work to countries where wages are lower. These countries are **2**..... to large companies because labor costs are cheap. Because English is the language used by a large number of international corporations, a large percentage of outsourcing work has gone to India, and the **3**..... has been sent to other countries. Now wages are rising in India, and more outsourcing work is being sent to other countries. Proponents of outsourcing point out that, as well as being beneficial to the outsourcing companies, it is also a major **4**..... to the economies of receiving countries. Outsourcing companies **5**..... some disadvantages, however. For example, there is sometimes a high **6**..... of employees, who aren't always happy with nighttime work schedules. Labor costs are rising in India and China. When costs in these countries start to **7**..... with costs in wealthier countries, companies will start sending their work to other places.

Social Networking

A

During the first decade of the twenty-first century, the phenomenon of social networking on the Internet **exploded** across the globe. Online social networking sites are websites that allow people to **post** personal information about themselves and to **connect** with people who have similar interests. It is a way of forming **community**, but a **community** that exists online rather than in physical space. Facebook, MySpace, LinkedIn, and Twitter are examples of some of the most commonly used social networking sites.

B

Recent **statistics** show that 75 percent¹ of Internet users around the world use social networking sites to some extent and that 22 percent of all time spent online is spent on these sites. Of all the countries in the world, Italy is **apparently** the place where social networking is most popular. Italians spend an average of six and a half hours per month per person on social networking sites, followed by Australians, with an average time of just over six hours a month. In comparison, the Japanese are much less interested in social networking, spending an average of just two and a half hours per person per month on these sites. The global average is close to five and a half hours per month. The social networking **trend** has increased among people of all ages.

C

The phenomenon of social networking sites may present unanticipated **consequences** for people's lives in the future. The **immense** popularity of these sites is evidence that they contribute to users' lives in positive ways, but there are drawbacks as well. Social networking sites allow people to broaden their social reach both personally and professionally. These sites allow users to stay in **contact** with friends and relatives and reconnect with old friends from the past. The sites also provide opportunities for people to connect with strangers in far-distant places who share similar interests or to seek support when **undergoing** difficulties such as a grave illness. In the business world, people use social networking sites to **carry out** business, **pursue** employment opportunities, or seek new business clients. Students of all ages discuss homework assignments and future educational and career plans. Social networking sites **eradicate** the limits **imposed** by the physical world and make it possible to communicate and **exchange** information with people everywhere.

¹BrE: per cent

D

On the other hand, concerns are growing about online social networking. As people spend more time **interacting** with each other online, they spend less time in face-to-face communication. Social networking can actually lead to separation as families and neighbors² spend less time together while they are busy using the Internet. There are also potential risks. Social networking involves making personal information available online, which means that, unless the user is careful, anyone can have access to that information. **Adolescents** may be particularly **susceptible** to this danger. It is also impossible to know anyone's true identity online. **Acquaintances** found on the Internet may not be who people think they are. The effects that social networking will have on our social relationships and sense of safety remain to be seen as the future **unfolds**.

Answer the questions about **Social Networking**.

Why Are Women Leaving Science Careers?

Generations of women **struggled** for the right to pursue careers in science and technology, yet today nearly half the women scientists in Europe and the Americas leave their careers. The difference in numbers between men and women who advance and **persist** in their fields cannot be attributed to race, ethnic, or social group. The **dire** consequences of this loss may become more acute as the number of women entering science careers increases. Since the 1990s, more women than men have enrolled in college, earned higher grades, and majored in science or technology fields. If the trend continues and more than half these women leave their careers by their mid-forties, **approximately** one-third of all scientists will leave their careers in the next twenty years. So why are women leaving the science careers they worked so hard to attain? Studies by **academic** and professional associations show the causes for the loss of this valuable resource are threefold: time, family responsibilities, and lack of role models.

High-level jobs in science, in both the corporate and the academic world, require **inordinate** amounts of time. With increased use of the Internet, cell phones, and other electronic forms of communication, scientists are not only required to be in the lab or office ten to twelve hours a day, but expected to be available the rest of the time, too. Professional time demands are the same for both men and women, but many more women opt out than men because of significant issues that men do not face.

Although women are nearing **equality** in the professional world, the **pressures** of caring for family still rests largely with women. According to studies, professional women with children still **bear** the majority of the responsibilities at home. They spend more time with the children and on taking care of the home than men. Biology dictates that women require extended leaves of **absence** when they are pregnant and give birth, yet to advance in their careers, women cannot afford to take time off until their late thirties, when the optimal time for having healthy babies is ending. Women can **devote** the necessary attention to neither career nor home life, often creating intense **frustration**.

Discrepancies in opportunities and salaries still exist between the sexes. Because there are fewer female role models in the upper levels of science and technology fields, women have fewer **mentors**, who provide **invaluable** support. Without **mentors**, women in the sciences go without the support, **guidance**, and networking needed to lead them through the complications of corporate culture, to **validate** their ideas and secure **funding** for research, and to access those who can help them **progress** in their careers. **Mentors** also help scientists develop business expertise:

Mentored scientists hold more patents, an important source of wealth. Women hold only 14 percent¹ of new patents awarded. Without mentors, women have to work harder to reach the same goals as men, and all the while, many women are still paid less than men for **commensurate** work.

To keep women scientists in the workforce, some companies are instituting mentoring programs, on-site child care, flex-time, and other innovative accommodations. Unfortunately, many companies are content to outsource or to bring in men from other countries to fill positions that valuable but frustrated women scientists leave behind.

Wheelchair Accessibility Issues

As many as 650 million people worldwide live with some form of physical **disability**, and about 100 million of the disabled need a wheelchair at least part of the time. Industrialized¹, higher-income nations in Asia, Europe, and North America are seeing an older population grow more **incapacitated** as they age, whereas in lower-income countries of Africa, Asia, and Latin America, **poverty**, conflict, injuries, and accidents **account** for most disabilities, many of them in children.

Wheelchairs provide a more independent lifestyle, but they come with their own set of problems: They are wide, **unwieldy**, and difficult to maneuver² in tight spaces, on slippery surfaces, and on steep **slopes**—not to mention impassable stair steps. Accessibility issues **abound** at home, work, and school; in **recreation** activities; and in transportation³.

One of the most difficult places to use a wheelchair is the home. The average doorway width of about 76 centimeters⁴ (30 inches) falls some 5 to 15 centimeters (2 to 6 inches) short of the space necessary to accommodate a wheelchair. To be accessible to a person in a wheelchair, bathrooms require grab bars in showers and tubs⁵, built-in shower seats, lower sinks and mirrors, and higher toilet seats. Kitchens need lower counters and shelves as well as accessible **switches** for lights, garbage disposals, and exhaust fans. Also, because most homes have at least a few steps, a wheelchair **ramp** is a must.

Many countries have laws requiring public buildings—workplaces, stores, restaurants, and entertainment and sports⁶ facilities—to be wheelchair accessible. To accommodate wheelchairs, building **exteriors** need wide sidewalks⁷ with **curb** cuts and **ramps**. Automatic doors, including those on elevators⁸, must be broad and remain open long enough for a person in a wheelchair to come and go with ease. In a building **interior**, **corridors** must be wide enough for a person in a wheelchair and another person on foot to pass side by side, and carpeting should be firm enough for wheelchairs to roll over easily. Restrooms⁹ must be wheelchair accessible, too. Although many countries have made these improvements, many more have yet to follow their example.

With appropriate technology, some wheelchair users can drive cars, although getting in and out of a vehicle while in a wheelchair usually **necessitates** a portable ramp. Many cities have subway and bus systems that accommodate wheelchairs, and the list is growing. For example, Beijing **updated** its subway system for the 2008 Olympics, providing disabled riders there access to it for the first time.

In most developing countries, a major concern is not so much wheelchair accessibility as access to a wheelchair. Growing public awareness is contributing to less expensive types of wheelchairs being designed for specific environments—for example, chairs **capable** of maneuvering across dirt roads and rugged **terrain** but lightweight and **compact** so they can fold up to fit in crowded spaces, such as the aisle of a bus. These wheelchairs also must be affordable and constructed of locally available materials for easy repair.

The number of people needing a wheelchair is expected to increase by 22 percent¹⁰ over the next decade, with most of the increase coming in developing countries, where fewer than 1 percent of those in need now have access to one.

Answer the questions about **Wheelchair-Accessibility Issues**.

Questions 1–3

Choose the correct letter, **A**, **B**, **C**, or **D**.

- In industrialized nations, disabilities are found more often among
 - older people.
 - children.

Learning Styles

There are three basic types of classroom learning styles: visual, auditory, and kinesthetic. These learning styles describe the most common ways that people learn. Individuals tend to instinctively prefer one style over the others; thus each person has a learning style that is **dominant** even though he or she may also rely somewhat on the other **approaches** at different times and in different **circumstances**.

Visual learners prefer to sit somewhere in the classroom where no **obstructions hinder** their view of the lesson. They rely on the teacher's **facial** expressions and body language to aid their learning. They learn best from a **blend** of visual displays and presentations such as colorful¹ videos, **diagrams**, and flip-charts. Often, these learners think in pictures and may even close their eyes to visualize² or remember something. When they are bored, they look around for something to watch. Many visual learners lack **confidence** in their **auditory** memory skills and so may take detailed notes during classroom discussions and lectures.

Auditory learners sit where they can hear well. They enjoy listening and talking, so discussions and **verbal** lectures stimulate them. Listening to what others have to say and then talking the subject through helps them process new information. These learners may be heard reading to themselves out loud because they can absorb written information better in this way. Sounding out spelling words, **reciting** mathematical theories, or talking their way across a map are examples of the types of activities that improve their understanding.

Kinesthetic learners may find it difficult to sit still in a **conventional** classroom. They need to be physically active and take frequent breaks. When they are bored, they **idget** in their seats. They prefer to sit someplace where there is room to move about. They benefit from **manipulating** materials and learn best when classroom subjects such as math, science, and reading are processed through hands-on experiences. **Incorporating** arts-and-crafts activities, building projects, and sports into lessons helps **kinesthetic** learners process new information. Physical expressions of **encouragement**, such as a pat on the back, are often appreciated.

In addition to these traditional ways of describing learning styles, educators have identified other ways some students prefer to learn. Verbal learners, for example, enjoy using words, both written and spoken. Logical learners are strong in the areas of logic and reasoning. Social

fer to work alone. Research shows that each of these learning styles, as well as the visual, **auditory**, and kinesthetic styles, uses different parts of the brain. Students may prefer to focus on just one style, but practicing³ other styles involves more of the brain's potential and therefore helps students remember more of what they learn.

Teachers who present their lessons using varied techniques that stimulate all learning styles **expose** students to both their **dominant** and less preferred methods of learning, aiding them to more fully reach their potential as learners.

Answer the questions about **Learning Styles**.

Questions 1–6

The Homeschool Option

Educating children at home as an **alternative** to formal education is an option chosen by families in many parts of the world. The home-schooling movement is popular in the United States, where close to one million children are educated at home. In Canada, 1 percent¹ of school-age children are homeschooled, and the idea also enjoys **growing** popularity in Australia, where 20,000 families homeschool their children. The movement is not limited to these countries. Homeschooling families can be found all over the world, from Japan to Taiwan to Argentina to South Africa.

Homeschooling is not a **novel** idea. In fact, the idea of sending children to spend most of their day away from home at a formal school is a **relatively** new custom. In the United States, for example, it was not until the **latter** part of the nineteenth century that state governments began making school attendance **compulsory**. Before that, the concept of a formal education was not so **widespread**. Children learned the skills they would need for adult life at home from **tutors** or their parents, through formal **instruction** or by working side by side with the adults of the family.

In the modern developed world, where the **vast majority** of children attend school, families choose homeschooling for a variety of reasons. For people who live in remote areas, such as the Australian outback or the Alaskan wilderness, homeschooling may be their only option. Children who have **exceptional** talents in the arts or other areas may be homeschooled so that they have more time to devote to their special interests. Much of the homeschooling movement is made up of families who, for various reasons, are **dissatisfied** with the schools available to them. They may have a differing educational **philosophy**, they may be **concerned** about the safety of the school environment, or they may feel that the local schools cannot **adequately address** their children's educational needs.

The legal environment surrounding homeschooling varies. In some places, a government-approved course of study is **mandated**, whereas in others, homeschoolers may be required only to follow general guidelines, or even none at all. Sometimes **periodic** progress reports, tests, or professional evaluations are **obligatory**. There are different approaches to homeschooling that individual families can take. Some follow a particular educational philosophy, such as the Montessori method or Waldorf education. Others use a mixed approach, borrowing from a variety of methods and materials. A large selection of prepared educational prod-

ucts is available to specifically **address** the needs of homeschooling families, and correspondence courses can also be purchased. In addition, homeschooling magazines and websites give families the opportunity to read about others' experiences and get ideas for different kinds of educational activities to try. As the homeschooling movement grows around the world, so, too, do the opportunities for homeschooling families to share experiences and ideas at conferences and on the Internet. Although most families continue to choose a traditional classroom education for their children, homeschooling as an alternative educational option is becoming more popular.

Answer the questions about **The Homeschool Option**.

Questions 1–3

Which of the following reasons that families choose homeschooling are mentioned in the passage?
Choose **three** answers from the list below.

- A** The large size of local schools
- B** The exceptional talents of their children
- C** The lack of variety of instruction in the majority of schools
- D** Disagreement with the educational philosophy of local schools
- E** Belief that local schools cannot adequately meet their children's needs
- F** Opposition to the periodic testing of their children

Questions 4–8

Do the following statements agree with the information in the reading passage?

Write

- TRUE** if the statement agrees with the information.
- FALSE** if the statement contradicts the information.
- NOT GIVEN** if there is no information on this in the passage.

- _____ 4. School attendance was mandated in the United States near the beginning of the nineteenth century.

- _____ 5. Before modern times, the majority of children did not attend school.
- _____ 6. Many nineteenth-century tutors were not adequately trained for the job.
- _____ 7. The majority of homeschooling families follow a similar educational philosophy.

Educating the Gifted

What is a **gifted** child? There are different ways to define this term. It may refer to special talents in the arts or to a high level of academic abilities. A child may be **gifted** in one specific area, such as music, or have talents in many areas. According to the U.S. National Association for Gifted Children, a **gifted** child shows an “exceptional level of performance” in one or more areas. In general usage, giftedness includes high levels of cognitive ability, motivation, **inquisitiveness**, creativity, and leadership. Gifted children represent approximately 3 to 5 percent¹ of the school-aged population.

Although giftedness cannot be **assessed** by an intelligence test alone, these tests are often used to indicate giftedness. By and large, giftedness begins at an IQ of 115, or about one in six children. Highly **gifted** children have IQs over 145, or about one in a thousand children. Profoundly gifted children have IQs over 180, or about one in a million children. Because very few education programs include any courses on teaching the gifted, teachers are often not able to **recognize** the **profoundly** gifted. Teachers are more likely to **recognize** moderately gifted children because they are ahead of the other children but not so far ahead as to be unrecognizable. For instance, children who can read older children’s books in first and second grade are often **transferred** into gifted classes, but children who are reading adult books are told to stop reading them. Those **profoundly** gifted students who are not **recognized** often **turn into** discipline problems when they are not offered **constructive** ways to focus their **extraordinary** creativity.

The practice of creating a separate, **enriched curriculum** for gifted students began in the early twentieth century. At that time, social scientists noted that gifted children often speak, read, and move at an earlier age than their **peers**. At a younger age they are able to work at a higher conceptual level, develop more **sophisticated** methods to solve problems, and show more creativity in their methods and **interpretation** of assignments. After the first schools for the **gifted** were established, these students were followed for many years to see if **enriched** education made a difference. It did. Gifted students who were grouped together and taught a special **curriculum** earned fifty times more doctoral degrees than gifted students who were not given an **enriched curriculum**. When gifted programs² have been cut, the parents of the participants have reported decreased **inquisitiveness**, motivation, and energy levels in their children, and a **simultaneous withdrawal** from the class-

room experience. Identified **gifted** students who attend schools without any program for the **gifted** show a steady decrease in motivation and test scores between first and sixth grade.

There are still very few opportunities for educating the **gifted** in the lowest socioeconomic levels. The schools that service the poorest areas often **dedicate** their efforts toward **remedial** teaching rather than accelerated curriculum, and students with **extraordinary** talents are often not **recognized**. About 25 percent of the world's **gifted** population are too poor to be noticed.

The Development of the Lightbulb

Thomas Edison is generally credited with the **invention** of the lightbulb. In fact, he was just one **inventor** among many involved in the process of moving the concept of incandescent light from **inspiration** to marketable reality. What he actually **invented** in 1879 was a carbon filament that lasted for forty hours. In 1880, he improved his idea, producing a filament **derived** from bamboo that burned for 1,200 hours.

The first person to successfully produce light with electricity was Humphry Davy, who connected a carbon filament to a battery in 1809. Other **inventors** worked on **refinements** of this idea. In 1835, James Lindsay **unveiled** an electric lamp, which cast enough light to read a book one and a half feet away. In 1854, Henrich Globel created the first actual lightbulb—a glass bulb containing a filament that glowed when electrical **current** passed through it. However, it burned out too quickly to have any commercial value. Then, Hermann Sprengel developed the Sprengel Pump, a **device** that used mercury to create a vacuum. Reducing the oxygen in the bulb allowed the filament to glow longer before burning out.

In 1874, Henry Woodward and Matthew Evans **filed** a **patent** for a light **specifically** described as “a shaped piece of carbon held between two electrodes enclosed in a glass vessel.” Woodward and Evans attempted to raise the necessary money to improve and market their **invention**; however, as **entrepreneurs**, they had little success finding anyone to **back** them financially. Eventually they sold the rights to their **patents** to Thomas Edison.

Edison had already been working on the same idea, but for him money was not a **critical** issue. He was no longer a solitary **inventor** working in his basement, but the head of a laboratory with the support of **investors**. He worked to refine the Woodward and Evans light because its filament burned out too quickly. Edison set about testing every material possible for use as a filament. “Before I got through,” Edison recalled, “I tested no fewer than 6,000 vegetable growths, and **ransacked** the world for the most **suitable** filament material.” He even considered using tungsten, which is the material **currently** used. Eventually, Edison tried a carbonized cotton thread filament **clamped** to platinum wires. When tested, it lasted forty hours. In 1880, he received a **patent** for this **invention**. By the end of the year, Edison had perfected a sixteen-watt bulb that lasted for 1,500 hours.

At the same time, Sir Joseph Swan was working on similar ideas in England. In 1860, he obtained a **patent** for a carbon filament incandescent lamp, and in 1878, another for an improved version of his lightbulb.

He presented it in a public lecture in 1879. In 1882, Swan sued Edison for patent **infringement**. As part of the settlement, Edison had to take Swan as a partner in his British electric works. Also, in 1877 and 1878, William Edward Sawyer and Albon Man were granted **patents** for electric lamps. Based on these **patents**, the U.S. Patent Office ruled in 1883 that Edison's patents were **nvalid**. Edison fought to appeal that **ruling**, and in 1889, the court determined that his patents were indeed valid.

Edison is famous for having said, "Genius is one percent inspiration and ninety-nine percent perspiration." It is an understandable statement coming from someone whose laboratory tested more than 6,000 filament possibilities. Nevertheless, one might also consider the adage "History is written by the winners." Edison may not have been the actual **inventor** of the lightbulb, but he was the man who had the genius, the business sense, and the financial **backing** to invent the first one that was commercially viable.

The Invention of Variable Pitch Propellers

Until the late 1920s, airplane **propellers** were made of a single piece of wood attached at the center¹ to the driveshaft of the engine. The tilt of the **propeller**, that is, how flatly it faced the wind, was fixed, which meant planes flew as if they had only one gear. If the plane had a fine **propeller**, it traveled the entire time as if in first gear, working well on takeoff and landing but working inefficiently during **sustained** flight. If the plane had a thick, **coarse** propeller, it traveled the entire time as if in high gear, working efficiently during sustained flight, but making takeoffs and landings dangerous and **prolonged**. This **inflexibility** meant that commercial uses of such aircraft were limited because the planes could not carry heavy loads either safely or efficiently.

In 1922, Wallace Rupert Turnbull patented his latest invention, the **Variable-Pitch propeller**. His **propeller** in effect gave airplanes gears. The propeller's **blades** were separate from each other, attached at the drive-shaft in the center, and could be moved independently or together to chop the air at different angles. The **propellers** could be tilted at takeoff and landing to act as if in first gear, chopping less air with each **rotation**, and could be tilted when **cruising** to act as if in high gear, chopping more air with each rotation. With this **Variable-Pitch** propeller, planes could now take off and land more safely and **reliably**, carry varying weights, and **handle** greater variations in wind speed and **turbulence**.

Turnbull was born in New Brunswick in eastern Canada in 1876. He studied mechanical engineering at Cornell, then continued his post-graduate studies in Europe, and returned to work at the Edison labs in New Jersey. In 1902, just one year before the Wright brothers made their historic flight, Turnbull went back home, set up his own lab in a barn, and started running his own **aviation** experiments.

To begin, Turnbull needed a wind tunnel. He built a wind tunnel, the first in the world, out of packing materials. In it, he tested different designs for **propellers** and wings; his research is the basis for many of the successful designs still in use today. Alone in his barn, Turnbull **designed** and tested his **Variable-Pitch** propeller. It was tested successfully in flight in Borden, Ontario, on June 6, 1927.

Turnbull spent his life experimenting and **designing** for the new science of **aviation** in his barn in Rothesay. He sometimes **conferred** with fellow aviation **enthusiast** Alexander Graham Bell in Nova Scotia, but for the most part, he worked in **isolation**. Unlike most engineers, he chose not to work in a university laboratory or in a lab such as Edison's, where

¹BrE: centre

he would have been supported by like-minded engineers and physicists. Instead, he spent his adult life in a barn he equipped himself. Depending only on his intelligence, **curiosity**, and work ethic, he **revolutionized** flight. He is honored² in Canada as a pioneer in **aviation** and a genius in the study of aerodynamics.

Laying the transatlantic **cable** was the culmination of the unflagging perseverance of one man leading like-minded men, of **disparate** technical and scientific advances, and of the need for faster communication. The first attempts at laying the **cable** in the 1850s, each of which cost an enormous amount of money, failed **utterly**. Yet as technology and science improved, and the need for faster communication increased, perseverance finally paid off.

The man who **rallied** support and raised money for the transatlantic **cable** venture was Cyrus Field, a New York businessman, who started the New York, Newfoundland, and London Telegraph Company in 1854. For the next twelve years, Field raised money and expectations in North America and England for repeated attempts at laying a **cable**, despite **catastrophic cable** breaks and a formal **inquiry** when the first **cable** stopped working within days.

The scientific and technological advances began with electricity, the study of which was attracting the greatest minds of the age. Samuel Morse invented a code that made it possible to send information over electric wires, and he made the first successful transmission in 1842. The next year, d'Alameida, a Portuguese engineer, announced the use of gutta-percha, a rubberlike sap from the gutta tree, as an **insulation** for wires. Thus, **two** of the **requisites** for an underwater **cable** were met. In the next several years, telegraph **cables** were laid in Atlantic Canada, across the English Channel and around Europe, and across the United States.

In 1857, the company Field founded **set out** to lay the **cable** that had taken months and almost a million dollars to make. The cable was made of 340,000 miles of copper and iron wire and three tons of gutta-percha **insulation**, too much for one ship to carry. The **cable** was divided between two ships, each towed by another, all four provided by the British and American navies. After only 255 miles of cable had been laid, the **cable** stopped transmitting and then **snapped**, sinking to the depths of the ocean. The second attempt was made in 1858, beginning at the midpoint of the Atlantic, from which each ship lay **cable** as she sailed to her home shores. Again, the **cable inexplicably** stopped working. They tried again a month later, beginning again from the middle and sailing in opposite directions. This time, success! Queen Victoria sent a message to President Buchanan, and both countries celebrated. Within hours, however, the signal began failing. To **compensate** for the fading

transmissions, Whitehouse, the American engineer, transmitted messages at higher voltages, eventually burning out the cable. Once a hero, Field was now vilified.

Work on the transatlantic cable was halted because of the American Civil War. During the war, the telegraph became indispensable, and enthusiasm for a transatlantic cable mounted. In Scotland, William Thomson, who would later be knighted Lord Kelvin for his work, corrected the design flaws in Whitehouse's cable. Kelvin also designed a mirror-galvanometer that could detect weak currents, thus allowing lower voltages and weaker currents to transmit information. In 1866, the world's largest steamship laid Kelvin's new cable, an unqualified success. Field's perseverance had triumphed in the end.

Answer the questions about **The Transatlantic Cable**.

Questions 1–4

Look at the following inventors and the list of descriptions below. Match each inventor with the correct description, **A–F**.

- A** burned out the first transatlantic cable by using high voltages
- B** was the first to be utterly successful in getting the transatlantic cable laid
- C** invented a type of insulation from the sap of a tree
- D** sent a telegraph message to President Buchanan
- E** was the first to attempt to have a transatlantic cable laid
- F** developed a code for transmitting messages by electric cable

_____ 1. Morse

_____ 2. d'Almeida

_____ 3. Field

_____ 4. Kelvin

Questions 5–9

Complete the summary using words from the list below.

In the 1850s, several unsuccessful attempts were made to lay a telegraph cable across the Atlantic Ocean. For the first attempt, a cable was manufactured of copper and iron wire with gutta-percha **5**..... . It was so heavy that the ships that carried it had to be **6**..... by other ships. This cable failed because it **7**..... and sank beneath the sea. The second attempt also failed. The third attempt appeared to be successful, and a message was **8**..... from England to the United States. However, the telegraph company did not **9**..... this time either. This attempt also turned out to be a failure when the cable stopped working, and the reputations of the project leaders were vilified.

noun	catastrophe	The initial attempts to lay a transatlantic cable ended in catastrophe for Field.
adjective	catastrophic	The failure of the initial attempts to lay the transatlantic cable resulted in a catastrophic loss of money.
adverb	catastrophically	Field failed catastrophically in his attempts to lay a transatlantic cable.

noun	compensation	There is no compensation for hard work and perseverance.
verb	compensate	Hard work can sometimes compensate for bad luck.
adjective	compensative	When the signals began to fade, they took compensative measures to keep the cable working.

noun	insulation	Rubber makes good insulation for an electric wire.
noun	insulator	Rubber is a good insulator.
verb	insulate	It was important to find a practical way to insulate the cable.
adjective	insulated	The transatlantic cable was insulated with gutta-percha.

noun	perseverance	Because of Field's perseverance, a telegraph cable was eventually laid under the Atlantic Ocean.
verb	persevere	An inventor must persevere to turn his ideas into reality.
adjective	perseverant	A perseverant person can find a way to achieve her dreams.

noun	triumph	The laying of the cable in 1866 was a triumph for Kelvin.
verb	triumph	Many people worked hard to make the idea of a transatlantic cable into a reality, and they finally triumphed.
adjective	triumphant	It was a triumphant day when the English queen sent a telegraph message to the American president.
adverb	triumphantly	They triumphantly announced the completion of the project.

Deforestation is a serious problem, and finding a solution to it will not be simple. It involves a lot of different countries and many political and economic factors. However, as individuals we can each make our contribution to the solution. It involves being more responsible about our use of products that come from logging.

Logging companies fell trees so that we can have wood to make a lot of useful products: houses, bags and boxes, writing paper, furniture. We all use these things in our daily lives and would not want to give them up. We can, however, be less wasteful in the way we use these things. Paper products, in particular, offer many opportunities for reusing, recycling, and reducing our use of them.

Many paper products can be reused. We tend to go shopping, carry our purchases home in a paper bag, and then throw the bag away. That means the bag is used only once, when it really has enough life in it to be used several times. We can take the bag with us on our next shopping trip or find other uses for it around the house. This is just one example of a paper product that can be reused.

Recycling is another important part of being less wasteful. Most kinds of household and office paper can be recycled, and these days most cities have recycling centers. Recycling paper is so easy that there is really no excuse not to do it.

Reducing our use of paper might be the most effective action of all. Electronic technology makes a lot of uses of paper unnecessary. We can create documents and read news articles on a computer without using paper. There are many other things we can do in our daily lives, such as using cloth napkins and towels instead of paper ones, to reduce our use of paper.

These actions may seem small compared with the terrible impacts of deforestation. However, they are things that we can each do and that, when added up, really can make a difference.

SPEAKING

I don't get a lot of time to spend in nature, but when I do, I like being in the mountains. When you're in the mountains, you're really far away from everything, from cities, I mean, and civilization. You can really feel like you're in nature. Also, mountains are different from other environments. They're higher up, so you see different kinds of vegetation, and if you go up high enough, there aren't even any trees, just plants low down to the ground. I really enjoy hiking. That's the main reason I like mountains. I like to hike to the top of a mountain, breathe the fresh, cool air, and enjoy the view.

There are a lot of different causes of environmental pollution, so there are a lot of different solutions. One of my favorites is transportation. Cars really pollute the air a lot. They really have an impact on the environment. Think about how it would be if no one drove cars. The air would be really clean! Of course, that won't happen. However, people would drive less if better public transportation was available. If we had good bus and train and subway systems, we would need fewer cars. I think that would be a really important part of any solution.

The chart shows a list of some of the species of birds that can be seen in Woodchuck County in two different seasons: winter and summer. Information is given about eight different species of birds. Three of the species listed—cardinals, crows, and woodpeckers—are observed in both summer and winter. That means that they are probably not migratory birds but live in the region all year. They can tolerate the winter weather in that area. Four of the species listed—bluebirds, mockingbirds, orioles, and vireos—are observed only in the summer. They must be migratory birds that travel to Woodchuck County for their breeding season and spend the winter in another place where the weather is warmer. One species of bird—juncos—is seen in Woodchuck County in the winter but not in the summer. Perhaps it migrates farther north in the summer for its breeding season.

I think people are fascinated by birds because they seem so free. They can fly, so it seems like they can go anywhere. People can't fly and are stuck on the ground. So birds are very different from us in that way. Some birds are also very beautiful. Some are very colorful. Swans are very graceful. So I think people are also fascinated by birds because of their beauty.

I'm not particularly fascinated by birds. I live in the city, so I don't see any interesting birds around me in my everyday life. I just see those brown and gray city birds. They aren't pretty, and they're a bit dirty, so I don't like them. If I lived somewhere where there were more interesting birds, probably I would be interested in them.

I'm not fascinated by animals in general, but I am a little bit interested in pet cats. I think they have very nice lives. They nap all day on a soft chair or in the sun, and then in the evening they get fed. They just nap and eat. They can chase mice if they feel like it. They can do whatever they like. What a life!

The charts show information about the size, rainfall, and temperatures of three deserts on three different continents. At 9,000,000 square kilometers in area, the Sahara Desert in Africa is much larger than the other two deserts shown. The Taklimakan, at 270,000 square kilometers, and the Great Basin, at 305,775 square kilometers, are similar to each other in size. The Taklimakan has the sparsest rainfall, with an average of 1 to 3.8 centimeters per year. The three deserts have similar summer temperatures: 30°C in the Sahara and Great Basin deserts and 25°C in the Taklimakan Desert. However, winters in the Sahara, with an average temperature of 13°C, are much warmer than in the other two deserts, where the average winter temperatures are -8°C and -9°C. The highest temperatures recorded in the Sahara and Great Basin are almost the same: 57°C and 58°C. The other extreme, the lowest recorded temperature, is not shown for those two deserts, but it is shown for the Taklimakan: -26.1°C.

SPEAKING

I don't think I would like to go to the top of a high mountain because I don't like to be cold. And I think climbing high mountains like Mount Everest is dangerous. It might be interesting to visit a desert because I would like to see the different kinds of plants that grow there. I think they would be very unusual and interesting to look at. But I don't like to be too hot, either, so I wouldn't want to stay in the desert for a long time. I don't really like extreme environments. I prefer to be comfortable.

I think people like extreme environments for two reasons. One is adventure. Some people like doing unusual or dangerous things. They want to see if they can climb to the top of high mountains or endure extreme hot or cold. They want to prove how strong they are and how much they can endure. The other reason is interest. Some people are interested in studying unusual plants or animals or rocks, different kinds of things, so they have to go to unusual places to find these things.

I can adapt easily to new climates as long as they aren't extreme! In the wintertime it's very cold in my city. If I have the opportunity, I like to take a vacation at that time and go to a warm place with a nice beach. I certainly can adapt easily to a warm beach climate, especially when I think about the cold weather I have left behind at home! However, I don't like to go anywhere that's too hot, or too cold either. I can't adapt to that.

People everywhere like watching sports. Many top athletes are admired throughout their countries, and some even have fans all around the world. These athletes are good role models for young people in many ways, although in some ways they can also be a bad example.

Top athletes get the attention of young people. Most children and teenagers like to follow professional sports. Professional athletes become heroes to them, and children want to be like their heroes. This means they will want to play sports, which is good for their health. Playing sports also teaches important lessons such as teamwork and learning how to lose (and win) gracefully. Professional athletes also demonstrate

the importance of working hard for your goals, of practicing regularly to become good at something. This is a good example for children to follow.

However, professional athletes are not always good role models. For one thing, the most famous athletes get paid very high salaries, much higher than most normal people can expect to earn. They also get a lot of attention, not only when they play their sports, but in other parts of their lives as well. This can lead children to believe that money and fame are an important part of sports. Children might focus more on these aspects than on the fun of the game or on the challenge of learning how to play well. Then there are those athletes who behave badly. For example, some take drugs to improve their performance in their game. This kind of behavior sends the wrong message to children.

Professional athletes can be very good role models for children, as long as they focus on the positive aspects of playing sports.

I know that some people find noise distracting, but I actually prefer to study in a noisy environment. I don't know why. When things are quiet, somehow I seem to notice that. It distracts me in a way. But when there is some noise around me—I don't mean loud noise like a rock concert or anything like that, but when I hear people talking in the next room, or people walking down the hall, just people going about their normal activities around me—I feel comfortable. I guess then I know I'm not alone. That feeling of having people around me actually helps me focus on my studies.

Like I said, being in a noisy environment isn't distracting to me, but sudden loud noises, such as the telephone ringing or a car horn honking, really bother me. Then it takes me a few minutes to get my focus back and go on studying. Also, as I mentioned before, quiet can be distracting to me. If there are no noises around me, no people talking or no cars rushing by, I notice the lack of noise. I just don't like it. That's why I don't really like to study at the library. It's too quiet!

I anticipate a big, big change in my study situation. For one thing, I will graduate in a few months. That's a major change. Then, I'm hoping to be able to go to graduate school. I'm working on the applications now, so it will be a while before I find out whether I'm accepted at any of the schools. All the schools I'm applying to are in other countries, so maybe a year from now I'll be living in a foreign country. That would be a huge change. If I don't get accepted at any of the schools, then I'll have to find a job and work for a while and apply to graduate school again. Whatever happens, by next year my life will be very different from what it is now.

WRITING

(sample response)

These days, technology has made it possible for us to be entertained without even leaving our homes. TV, DVDs, and computers can provide us with endless hours of entertainment. It may seem strange that people still like to go out to see live performances such as a circus. The circus, however, can provide things that electronic entertainment cannot.

I think the most attractive aspect of the circus is that, compared with the electronics we are used to, it seems exotic. Seeing a circus is very different from the things we are used to seeing and experiencing in our daily lives. We do not normally get to see live animals, especially trained ones that perform, or real people who dress in funny clothes and do difficult tricks. In ancient times, circus audiences may have been awed to see things they had never even heard of. In modern times, we have heard of these things and have probably even seen them on TV, but we rarely get to see these interesting things in real life.

Going to the circus is a special experience because it is different from the things we normally do. We get to leave the house and go to a special stadium or circus tent. We get to hear all the sounds and smell all the smells and eat all the special circus junk food that is sold before the performance. It takes us out of our daily experience and transports us for a short while to a different world in a way that electronic games or TV shows cannot. It is something that is not available to us every day, and that makes it even more special.

Even though we live in a world filled with modern technology, the circus can still offer us a special and exciting experience.

SPEAKING

(sample response)

In my city, there are a lot of different forms of entertainment. There are movies, theaters, concerts, and nightclubs. It's a big city, so you can find almost anything to do that you want. I suppose a special form of entertainment we have is the summer theater festival. During the summer, there are live theater performances in the park. Some of the shows are free, and others you have to buy tickets for. When festival time comes around, almost everybody goes to at least one of the performances. That's one kind of entertainment we have that's very popular; and everyone talks about it. During the winter holidays, we also have a series of concerts that a lot of people enjoy. Other than those special events, people in my city mostly just enjoy the usual kinds of entertainment that people everywhere like.

I definitely prefer to see live entertainment. I really enjoy going to concerts, and nothing beats seeing a live concert performance. It really makes a difference to be in the same room with the musicians and to be able to watch them as they perform. It's a totally different experience from listening to recorded music. For music, seeing a live performance is really important. For other kinds of entertainment, it doesn't matter to me as much. Going to a play in a theater or watching a movie on TV is all the same to me.

I like to play the guitar, but I don't think I can say that I'm very talented at it. I wish I were, but I enjoy it anyway because I love music. I don't have any other performing arts talents. I have some artistic talents, though. I like to paint and draw, and I'm trying to develop those talents more. I take art classes occasionally. That's about all the talents I have.

The chart shows how much time people of different ages spend engaged in various pastimes. It shows two intellectual activities—reading and computer use. There is also a column for physical activities—sports and exercise. The information is about how people spend their leisure time on weekends. According to the chart, teenagers spend the least amount of time reading, much less than adults do. They spend just five minutes a day reading, whereas adults aged twenty to sixty-five years old spend thirty minutes a day and adults aged sixty-six and older spend an hour a day in this pastime. Teenagers spend more time on the computer than people in the other two age groups—seventy-five minutes a day. The age group that spends the most time engaged in physical activities is adults aged twenty to sixty-five, and the age group that spends the most time reading is adults sixty-six and older. Adults aged

sixty-six and older are the ones who spend the least amount of time engaged in physical activities—just twenty minutes a day.

One of my favorite pastimes is going to the movies. I really enjoy movies of all kinds. I like drama and comedy and action movies. I like going to the movies with my friends and then talking about the movie afterward. We often go to a restaurant or a café and talk about the movie: whether or not we liked it and why, what we thought about the actors, how it compares with other movies, things like that. It's really interesting. So I think I could say that's my favorite pastime. I also like to read, I enjoy watching sports, and sometimes I play a little tennis.

I enjoy both physical and intellectual activities, but I guess I prefer intellectual activities a little more. As I said, I love discussing movies. I also like talking about books I read or articles I read in the newspaper. It's great to spend an evening at a café with my friends talking about these kinds of things. But physical activities are important, too. Maybe I don't do them every day, but I like to get some exercise a few times a week. I like to play tennis or sometimes just take a walk.

Trains, planes, and automobiles have all become common modes of travel within the past 200 years, and they have all had significant effects on the way we live. If I had to choose which one of these three was the most significant, I would choose automobiles. Automobiles affect the way we live and work, and they affect the way the world around us looks.

Automobiles have given us easy access to many things in our daily lives, so we have more choices about a lot of different things. We can shop at a variety of stores, for example, because we can get to them by car. We do not have to shop only at the stores that are nearby. We have more choices about which doctors we want to have treat us or which lawyer we want to hire or which hairstylist we want to use because automobiles have increased the distances that we can easily travel. We have more choices about places to study or work because we can get to more places by car.

Automobiles have also affected the way the world around us looks. Because so many people depend on automobiles, there are paved roads and parking lots everywhere. This was not true in the days before automobiles. Houses, shopping malls, and apartment buildings are all built with garages attached to accommodate cars. Gas stations are everywhere. The world today looks very different than it did 100 years ago, and much of this is because of the automobile.

Automobiles have made a lot of changes in the way people go about their daily lives. This is why I think the automobile is the most significant transportation innovation of recent times.

SPEAKING

(sample response)

In my city, people generally use buses, bicycles, and cars to get around. In my opinion, bicycles are the most efficient mode of transportation. I say this because there's a lot of traffic on our streets, especially during rush hour: Sometimes the cars and buses don't seem to move at all because there are so many of them. We have terrible traffic jams. For me, however, this isn't a problem because I almost always use my bike to get around. When all the cars and buses are sitting there waiting to move, I speed right by them on my bike. I never get stuck in traffic jams. I get everywhere quickly and efficiently on my bike. I really love it. The only time I don't like riding my bike is when it rains.

I think trains are great for long-distance travel. They're a lot more comfortable than buses because they have more space. You can get up and walk around on a train, but you can't do that on a bus. Trains are more relaxing than cars because you don't have to do the driving yourself and you don't have to deal with traffic jams or worry about getting lost. Trains usually have comfortable seats. They have large windows so you can enjoy the scenery. I love traveling by train.

In my opinion there are very few drawbacks to train travel. Sometimes the tickets are expensive, but that depends on where you're going. Sometimes the schedule isn't completely convenient, but I don't mind changing my plans a little to fit a train schedule. A lot of people don't like trains because they don't give you the same independence that traveling by car does, but I don't mind that.

The chart shows the size of three different subway systems using different measures: track length, number of stations, and number of passengers. Each one of the subway systems shown could be said to be the largest one, depending on which measure you use. The London Underground has the most track, the Paris Metro has the most stations, and the Moscow Metro carries the most passengers. The London Underground has almost twice as much track as the Paris Metro but twenty-five fewer stations, so the stations on the Paris Metro must be much closer together. In fact, of the three systems shown, Paris has the most stations but the least total track length. The Moscow Metro carries twice as many passengers as the London Underground, although it is only about three-quarters the size of the London system. Its trains might be very crowded. Although the Moscow Metro carries the most passengers of the three systems, it has the fewest stations.

SPEAKING

The subway stations in my city do not have interesting architecture, in my opinion. They are very modern, and I don't like that style. It just isn't warm and inviting. It isn't comfortable. It's all straight lines and no pretty decorations. Our train station, on the other hand, has very beautiful architecture. It's an old building and was built in the classical Greek style, which I like very much. It has columns and statues of mythological figures. It's a very interesting building to look at.

Our city library usually has exhibits of paintings and other kinds of art by local artists. It's interesting because they change the exhibits several times a year, so there's often something new to see. I think this is a great way to use space in the library, because a lot of people go there. They get to see what artists in our community are doing. I think there's also work by local artists in our city hall, but the problem with that is that most people don't go there very often. They don't have a reason to go there, so that art doesn't get seen by as many people. The library is a better place. Subway stations would be a good place, too, because most people use the subway. However, in my city, there isn't any artwork in the subway stations, unfortunately.

If more people drove electric cars, that would help solve some of the problems created by gasoline-powered cars. I believe that money, convenience, and education are the three major factors that would persuade more people to drive electric cars.

Money is a powerful incentive. If electric cars are cheaper to buy than gasoline-powered cars, then people will become interested in them. If electricity is cheaper to use than gasoline, then people will want to own electric cars. Clearly, gasoline is becoming more expensive every day. If car manufacturers can produce electric cars cheaply, then the monetary incentives will be in place and more and more people will start buying electric cars.

Convenience is almost as important as money. Electric cars need to be easy to use for them to be appealing. If putting a charge in a car battery is as easy or easier than filling up the tank with gasoline, then people will find electric cars attractive. If electric cars are small and easier to park than larger gasoline-powered cars, that would be another

attraction. If people see electric cars as easy to own and easy to use, they will be more interested in buying them.

The third factor is education. People will become more interested in driving electric cars when they understand the problems with gasoline-powered cars. Educating the public about issues of pollution and decreasing oil reserves may persuade more people to consider electric cars.

If people believe that electric cars are cheap and easy to use and if they understand the reasons why we need to move away from gasoline, they will be more likely to embrace them.

SPEAKING

(sample response)

I'm not very interested in cars. I just want something that will take me places. I don't care if a car has flair. I don't care if it can go really fast or what color it is or anything. I just want a car that is easy to take care of and that doesn't need repairs all the time. I know some people are very interested in cars and know all about the different models and the different things that different cars can do, but that's not me. I just need transportation.

I prefer to live in an urban area. I grew up in the city, and I still live there. I can't imagine living anywhere else. A city has everything. It has all kinds of stores so you can buy anything you need. It has movies and theaters and museums and restaurants. All my friends live in the city, and most of my relatives do, too, so I feel like I have everybody nearby. I don't like rural areas. They are so quiet, it makes me feel afraid. And there's nothing to do. There are no stores or museums or anything. And the suburbs just seem so boring. I don't know why anybody would live anywhere that wasn't a city.

The chart shows literacy rates for the adult population in four different countries, as well as literacy rates for the entire world. It also shows the differences in male and female literacy rates. Two countries have literacy rates higher than the world rate of 82 percent. Country D has almost 100 percent literacy, and the rate is the same for both the male and female populations. Country C has a literacy rate just over 90 percent, but there is a significant difference between the male and female rates. In fact, in all the countries except for Country D, there is a difference between the male and female literacy rates. This reflects the world literacy rates, which show a 10 percent difference between male and female rates. In Countries A and B, the difference between male and female literacy is very large. In Country A there is a 30 percent difference, and in Country B there is a 40 percent difference. Around the world, there are more literate men than literate women.

Of course it would be best to have a teacher who specializes in the subject being taught and is also very skilled at teaching, but if I had to make a choice, I think I would choose the one who is skilled at teaching. Of course, I assume this teacher would have a certain amount of knowledge about the subject. I think the best teachers are the ones who make their students want to learn and can show them how to learn. If you know how

to learn, you can find any information you need. And if you want to learn, you will look for that information. So a teacher might not know every last piece of information about something, but a good teacher can help the students figure out how to find that information. I have had teachers who knew a lot about their subjects but who were so boring that I learned very little from them. To me it didn't matter what they knew. They still didn't help me learn about it.

Clearly, the most basic skills children need to learn to function in modern society are computer skills. Computers in today's world are like books have been, or were. Nowadays, computer literacy is as important as reading and writing. Children have to learn how to use different kinds of software and how to find information on the Internet and things like that. But I also think there is a skill even more basic than that that we need to function in modern society. That skill is the ability to change rapidly. Technology changes rapidly, and we have to keep up with it. Today, we use computers in a certain way, but a few years from now everything might be different and we'll have to adopt new methods of work and communication. What we teach children in school today might not be completely useful by the time they graduate. Learning the skill of changing is as important as anything else.

Celebrations are very important for any society. They bring families together, give people a sense of identity, and provide a break from the usual routines of life.

An important benefit of traditional celebrations is that they give family members opportunities to spend time together. This is especially important in the modern world, where families are becoming more separated. Family members often do not live in the same city, or even the same country, like they did in the past. When there is an important celebration, family members usually want to spend it together. Often they have special family traditions such as preparing special food together or gathering at a certain place. Families look forward to the special days in the year when they can do these things together.

Traditional celebrations give people a sense of identity. Celebrations that are traditional in a certain place or for a certain culture help people feel more connected to their place or their culture. They help people feel like they are part of something that is meaningful.

Celebrations give people a break from their normal routines. Whether it is something that takes place every year or a one-time special event, a celebration is a chance to relax and have fun with friends and relatives. It is something that adds a little bit of excitement to life. Annual celebrations are especially important because they give people something to look forward to throughout the year.

Humans have been enjoying celebrations since ancient times. Celebrations are important to individuals, families, and society as a whole.

At the beginning of the year, New Year's Day celebrations are important. Everybody enjoys this celebration because we stay up and have a party until very late. We want to be awake at midnight when the new year begins, and the party usually continues past that hour. Another very important day in my country is Independence Day. Everybody in the whole country is excited when that day is approaching. It's a day with a lot of meaning for us. We have many other traditional celebrations throughout the year. We really like to celebrate in my country!

In my country, Mexico, we celebrate the Day of the Dead at the beginning of November. It's the day when we remember our loved ones who have died. The traditional ritual is to make an altar in the house. We put

special food on the altar and things that remind us of our dead loved ones. We decorate it with yellow flowers and other traditional decorations. Some people make very beautiful altars. It's a very old tradition.

The chart shows ticket sales at the National Theater for the six-month period from January through June. The most popular group of performers during that time was the National Mime Troupe. Five thousand tickets were sold for their performance titled "Humorous Situations." Only half as many tickets were sold for the performance of *Carmen*, put on by the City Opera. That was the least popular of all the performances listed on the chart. The second least popular performance was "Works of Beethoven" by the National Symphony Orchestra, with 3,000 tickets sold. The "Rock Stars Live!" concert and the *Swan Lake* ballet were both

almost as popular as the “Humorous Situations” mime performance. There were 4,750 tickets sold for each of those performances. Opera and classical music do not appear to be very popular forms of entertainment at the National Theater. People appear to prefer less serious forms of entertainment such as humorous mime and rock music.

SPEAKING

(sample response)

I usually prefer to see humorous performances. I like to see funny things and hear jokes. If I spend the money and time to go to the theater to see a live performance, then I want to have a good time. I want to laugh. I want to relax and forget about my worries. I actually enjoy serious performances, too. The most important thing, really, is to have the chance to watch skilled performers. But I choose to see humorous performances more often than serious ones.

My country is small. We have some renowned actors and musicians whom we really love, but they're known only to people in our country. They aren't famous in other places. We also enjoy performers from other countries. We like the famous Hollywood actors and musicians from different places. We like all the international stars, just like people everywhere.

I like both kinds of movies. I like real stories and made-up ones, but I particularly enjoy movies that portray real events and people from history. I enjoy seeing what life was like during a different period in history. I like to see what the houses looked like, the clothes, the towns and cities, all the details of daily life. I especially enjoy movies that show those details and show them correctly, that make the effort to really show what life was like. Historical events are interesting to learn about, but to me learning about the details of daily life in the past is even more interesting.

The salaries paid to nurses and doctors vary widely, according to the information in the chart. The two countries with the lowest salaries, Country A and Country B, are source countries. They provide a supply of health care workers to the destination countries. The salaries paid to doctors and nurses in these source countries are much lower than the salaries paid in Country C and Country D, which are destination countries. The salaries in Country A are much lower even than the salaries in Country B. In Country B, nurses earn ten times as much as in Country A. The difference in doctors' salaries is even greater.

The difference in salaries between the source countries and the destination countries is greater still. Nurses in Country D, for example, earn almost ten times as much as nurses in Country B. Doctors in Country D earn almost fifteen times as much as doctors in Country B. It is easy to see why source countries have a hard time retaining health care professionals. From the standpoint of the doctors and nurses, working abroad is a much better deal.

I am a journalist. I chose this profession for several reasons. First, I like to write and always have, ever since I was a small child. I'm also interested in politics and current events. I like to keep up with what's happen-

ing and analyze different political situations, and I love telling people my opinion about things. As a journalist, I get to do all these things that I really love: write, follow the news, and tell people my opinion. It's great!

Because I am just starting out in my profession, I hope things will change a lot for me over the next decade. Right now I have a job as a reporter for a small newspaper in my city. I hope that in ten years I will be working for a much larger newspaper. I also hope by then to be working as a foreign correspondent, reporting the news from abroad. That's really my biggest goal. I think I can make it in ten years.

My profession offers a lot of opportunities for working abroad. A lot of people are lured to journalism because they are interested in traveling to other countries. As I mentioned, that's a primary goal for me, too. Some journalists live abroad and report the news regularly back to the newspaper in their own country. Other journalists don't live abroad but travel regularly, depending on where the news is happening. There is always important news happening all over the world, so journalists get to travel a lot if that's what they want to do.

The chart shows information about two groups of patients who were suffering from mild cognitive impairment. Each group followed a program of one hour of daily exercise for six months, but they did different kinds of exercise. Group A did aerobic exercise, and Group B did non-aerobic exercise. The charts show changes in mental capacity in each group after six months of exercise. Group A showed improvement in two areas: thinking speed and word fluency. Capacity in memory did not change. Group B had a much worse experience, because there was deterioration in all three areas. This information shows that aerobic exercise can have positive effects on mental capacity for patients suffering from cognitive impairment. Although it did not help patients improve their memory, it appeared to at least stave off deterioration in this area. Non-aerobic exercise had no positive effects, and the patients' mental capacity continued to deteriorate during the study.

SPEAKING

(sample response)

I think that exercise improves my mood. I play soccer often with my friends, and I always feel really good afterward. Of course, there are other factors. It's great to spend the time with my friends, and if we win a game, that makes me feel really good. But I think the exercise affects my mood, too. Even if I go for a run by myself, it puts me in a better mood. Other things that help improve my mood are listening to music, if it's happy music, of course, or energetic music. Sad music would only make me feel worse. Watching funny movies usually helps me feel better, too.

I'm not sure if improving brain capacity will make exercising more popular. Exercise won't make you smarter; at least I don't think it will; it just slows the deterioration of the brain as you get older. That's probably important for older people, but younger people are more interested in other things. Some people like to exercise, but a lot of people don't, or they don't have time for it. I don't think this research will change that. I think people will just keep doing whatever they did previously. Some will exercise and others won't, depending on whether or not they enjoy it.

Personally, I think exercising is important and I try to get regular exercise. However, I also think it's up to each individual to choose whether or not to exercise. All the information is there, Everybody knows the benefits of exercise or can easily find them out. If some people choose not to

exercise, they're the ones who have to live with the results of that. They might have poor health or be more depressed or something like that, but it's their choice. I think information should always be made available, but after that, each person has to decide what he or she will do with that information.

Modern medicine has made it possible for people to live longer lives. Drugs have been developed to cure many common diseases and alleviate many chronic conditions. This has obvious benefits for individuals, but the benefits for society are a bit less certain.

Because of modern medicine, people nowadays not only live longer but live healthier lives, too. Fewer people die young of communicable diseases because there are drugs to cure or prevent such diseases. The lives of many older people are enhanced by medicine that prevents or controls many of the conditions that can cause illness in the elderly.

Often people are interested in visiting these sites because it is a popular thing to do. They are not drawn to a place out of respect or appreciation for what it represents. They go because everyone else goes or because they want an interesting adventure. Therefore, education is very important. People need to understand the meaning and value of these ancient sites and the impact that tourism has on them. This is an important part of preserving these sites. Then, if access to the sites is restricted, perhaps people will understand the reasons why and will not protest it so much. Whether or not the general public agrees, however, everything possible must be done to preserve archeological sites.

I'm not really interested in outdoor adventures like hiking or rafting. I don't like physical danger. For me a really interesting adventure is to visit a new city where I've never been before. I like trying to find my way around a new place. I enjoy trying to figure out the people and what life is like in that city and where the interesting places are to go. It's not a dangerous kind of adventure at all, but it's interesting, and it's even more interesting and exciting when you're visiting a city in a foreign country.

When I travel, I like to stay in really comfortable hotels. I like the hotels that have really comfortable rooms with high-quality sheets and blankets on the bed. I like hotels that have really good personal service, and most of all I like hotels with good food. It's a special luxury to order breakfast from room service. I don't mind paying more for a luxury hotel. Staying in a hotel like that is half the fun of traveling.

It's not really important to me to have luxuries in my daily life. Most of the time I'm very practical. I just live a normal life with normal things, and that's okay with me. But I do like to have luxuries on special occasions, like staying in a luxury hotel when I'm traveling, or going to an expensive restaurant on my birthday. When you save luxuries for special occasions, then they're more appreciated. When you have them every day, like driving around in an expensive car, for example, then they don't seem so special any more. You don't even notice them, and they stop feeling luxurious.

The preservation of archeological sites is extremely important. The reason is quite simple: Once they are gone, they are gone forever. Those who hope to preserve such sites need to provide education so that the public understands their importance.

Archeological sites contain buildings and objects that have been around for a long time, for thousands of years in some cases. They provide us with a connection to past civilizations, to the people who came before us. They contain valuable information about our ancestors and where we came from. If we lose this information, we lose the possibility of learning many things about our history. It is terrible to think that something that has lasted for thousands of years can be destroyed in a relatively short period of time by the idle curiosity of modern tourists.

Modern medicine has enabled many people to have many more years to enjoy their lives. Most individuals would agree that this is a desirable outcome.

On the other hand, more people living longer means that a larger fraction of society is made up of older people. If many of these people are past retirement age, that means they are no longer making an economic contribution to society. However, they still require support for themselves. Many people living longer also means that the population is larger. The longer people live, the more resources they use, and society must find a way to provide for their needs.

Modern medical science aims to help people live longer lives and healthier lives, too. This is a good thing in many ways, but it is a situation that also has many complications.

SPEAKING

I think it is important to spend money on investigating new drugs, of course. After all, drugs can cure many diseases and allieviate many conditions. But we also need to think about prevention. It would be a good idea to spend more money on educating the public about things that can be harmful to the health, such as smoking, or drinking too much, or eating junk food. There is education about those things, but people still smoke and drink and do other things that are unhealthy. People need to really understand the effects of bad habits. Too many people have chronic diseases because they drink too much or eat the wrong kind of food. I really think education is an important part of health care.

I think when people live healthy lifestyles, they get sick less frequently. I think targeting dietary and exercise habits is really important. Lack of exercise and a poor diet can have different kinds of negative outcomes. For example, they can lead to obesity, being overweight, which can cause heart disease. Poor diet can also lead to diabetes, which is a serious health problem. I think encouraging people to eat well and exercise frequently are important areas to focus on.

Doctors can give injections that prevent influenza, so everyone should get these injections. That's the easiest way to combat this disease, and many other diseases, too. There are injections to prevent many of the most common diseases. People also need to be educated about good habits to prevent spreading disease, such as washing their hands, or staying home if they are sick. There are some common diseases, such as the common cold, that can't be cured or prevented with an injection. Scientists need to keep investigating these diseases until they discover a way to cure them.

The charts show whether or not three different cruise companies follow certain environmentally friendly practices, and they compare this information in two different years: 2000 and 2010. In 2000, two of the companies were already recycling most of their waste and avoiding dumping wastewater into the sea. These companies were Sun Cruises and Water World Tours. The Sea Adventure company did not follow these practices. None of the three companies had systems to reduce air pollution in 2000, and none of them avoided traveling to places with delicate underwater ecosystems. By 2010, all three companies had made changes to become more environmentally friendly. In fact, in that year, two of the companies, Sun Cruises and Water World Tours, were following all the practices shown on the chart. Sea Adventure was recycling waste and avoiding dumping wastewater into the sea, but they still did not have a system to reduce air pollution and still traveled to destinations with delicate underwater ecosystems. Sun Cruises and Water World Tours are probably more attractive to people who are interested in ecotourism than Sea Adventure is.

I always choose to spend my vacations somewhere in the wilderness. I live in a big city, and I'm surrounded by crowds and noise all the time,

so when I'm on vacation, I want to be in a really quiet place. I try to find as remote a place as possible. I like hiking and camping in the mountains. Once I went on a rafting trip on a river. Really, I'm happy spending my vacation anywhere out in the woods.

When I travel, I avoid any place with crowds. That doesn't mean just cities. Some national parks can get very crowded, too, and then you don't feel like you're in the wilderness. I try to avoid taking my vacation in the summer because that's when everyone else travels and every place is crowded. I like to travel in the fall. It's a beautiful time of year, and it's much easier to avoid crowds then.

Luxury accommodations aren't important to me. In fact, they make me feel a little uncomfortable because I'm not used to them. I like everything plain and simple and especially inexpensive. My favorite place to stay when I'm traveling is in my tent. For one thing, it's inexpensive. For another, it allows me to be in the middle of nature. I go to sleep at night to the sound of the wind blowing through the trees above me. I wake up in the morning surrounded by birdsong. What could be better than that?

The chart shows the percentage of the total number of students who enrolled in different types of courses during the summer of 2010. The most popular type of course was cuisine. Thirty-five percent of students enrolled in cuisine courses. Science and philosophy had the lowest enrollment, at 5 percent each. In general, the creative types of courses had higher enrollments. Cuisine, photography, and painting and drawing are all courses where students learn how to do creative things. Taken all together, these courses made up 80 percent of the total enrollment. The courses with more serious content, on the other hand, were much less popular. History, philosophy, and science are all academic types of courses, the kinds of things one might study in a college degree program. Only 20 percent of students signed up for these courses. Perhaps during the summer people prefer to spend their time taking a more relaxing type of course.

I'm from the coast, so the cuisine of my city is all about seafood. We have a lot of different fish dishes. We are famous for a special kind of seafood stew that we make. We enjoy this dish on all our national holidays. There are also some different kinds of baked fish dishes that are famous in my city. We have a variety of seafood dishes, and tourists always eat them when they come to our city.

Different kinds of fish, of course, are the most common ingredients in our cuisine. Almost all our traditional fish dishes contain garlic, so that's another common ingredient. Also, we eat almost everything with rice. Besides that, because it's a tropical area, we have a lot of tropical fruits that we use in our cooking—mangoes, coconuts, things like that. They're common ingredients in stews and soups as well as in desserts.

We still enjoy the traditional fish dishes that our city has always been famous for, but we use more modern cooking methods now. Instead of cooking over a fire, people usually cook on a gas stove or in a microwave oven. People now have more access to ingredients from other places, for example, different kinds of spices that are common in other countries—people in my country are used to them now, too. They aren't traditional flavors for us, but they're becoming more common in our cooking. I think in the past, people ate the traditional dishes more often, maybe even every day. Now we're so busy, we don't have time to cook as often, so we eat those traditional dishes less often, maybe once a week or even once a month. In the future, I think this will be even more true. People will eat more fast food and more frozen food from the grocery store. They'll have less and less time to cook the traditional dishes, and maybe they'll even forget how to cook them. I hope not, but it could happen.

Many people enjoy shopping in large chain stores, whereas many others have a great dislike for them. Large chain stores offer a number of advantages to shoppers. However, they also have several drawbacks.

One of the advantages of large chain stores is that they generally offer a wider selection of products than smaller, locally owned businesses do. Because a chain store is owned by a large company, it has access to many more sources of products than its smaller competitors do. This allows it to offer a greater variety of products on the store shelves. Chain stores can also sell products in their stores at lower prices. One reason is that, being part of a large company, it is easier for them to seek out the manufacturers that charge less. Another reason is that they get discounts for buying in very large quantities.

Chain stores also have disadvantages. They cannot offer the personalized services that small stores can. People who run small stores are very familiar with the products they sell. They can make knowledgeable recommendations to their customers, they can answer questions about the products, and they can special-order items. Employees in chain stores, on the other hand, usually know very little about the items they sell. They often cannot help customers beyond telling them in which part of the store something is located.

Chain stores make things more convenient for shoppers, but they also have the effect of making things less personal. A place that has a balanced mix of large and small stores, if it exists, would offer shoppers the best of both worlds.

A store where I enjoy shopping is a large bookstore near my house. One characteristic that draws me to it is that it is a welcoming place. Anyone can go there and spend as long as he or she wants. No one bothers you if you sit down with a book and spend a long time reading it. You might buy it or you might not. No one bothers you about it. It's a place where you can feel comfortable just relaxing. Another thing I like is that it has all kinds of books as well as magazines and CDs. Whatever mood I'm in, I'm sure to find something I feel like looking at or buying. The best thing of all is the coffee shop. They sell great coffee and pastries. It's a nice place to spend a Sunday afternoon, reading and sipping coffee, no pressure, just relaxation.

I think it's important to spend money on clothes. I mean professional clothes. The clothes you wear are an important part of your professional image. Your clothes aren't, of course, as important as your professional skills and experience, but they really add to it. I mean, if you look like a professional, people will believe you are one. They will pay more attention to what you can do than if you dress like a slob. I always spend a lot of money on business suits. I buy suits with a good cut and high-quality material. It's really worth the money.

If you're going to spend a lot of money on something, you have to be sure you know what you're buying. It doesn't matter if it's clothes or a car or a house. You want to make sure you're getting what you want. So, you have to do research. Find out what the clothes are made of or which car goes the fastest or if the house is in good condition. Think about why it's worth it to you to spend money on this product, and then make sure that the one you buy has these characteristics. One thing I do before I spend a lot of money on something is find a friend or relative who knows about the thing I want to buy. Before I bought a car, for example, I talked to my

uncle because he owns a car similar to the one I wanted. I asked him about his experience with it and how he bought it. That helped me a lot when I finally bought my car. Doing research and asking advice from experienced people are, I think, the most important tips.

I like to run. I run almost every day for exercise, so the shoes I wear for running are really important. If my running shoes don't fit me right, I could have a lot of problems. It's not just about comfort, but I could have a lot of physical problems if I don't wear the right shoes, because I run every day. That's why I'm loyal to a certain brand of running shoes. I've found a company that makes shoes that fit me just right. I really like them. I always buy that brand of shoes because I know they're exactly what I want. I think that's the only case where I have brand loyalty. Other things aren't as important to me. I might choose something because the price is right or I like the way it looks or something like that, but not usually because of the brand. I'm really selective only about running shoes.

Celebrity endorsements are used a lot in promoting products, so they must persuade a lot of people to buy certain brands. Some people pay a lot of attention to celebrities; they really admire them and want everything their favorite celebrities have. Some people think that a celebrity endorsement means that the product is better or more popular. But it doesn't convince me. It makes no difference to me what a movie star or athlete buys. Anyhow, I don't think celebrities really buy those things. They make an endorsement, but that doesn't mean they really use the product.

Outsourcing of labor to other countries has become a common practice. The advantages and disadvantages of this practice depend on your point of view. The effects on a customer or worker in the company's home country are different from the effects on the people in other countries that do the outsourced labor.

There are both advantages and disadvantages for people in the company's home country. For the company's customers, there may be the advantage of lower prices. If the company saves money on labor, then it can offer lower prices to its customers. On the other hand, there are some disadvantages when a company outsources customer services to a foreign country. There can be difficulties with communication when the customer service provider does not understand the customer's language or culture very well. In addition to disadvantages for customers, there is the serious disadvantage for workers, who become unemployed when their jobs are sent to workers abroad.

For workers doing the outsourced labor, the significant advantage, of course, is that outsourced labor provides them with opportunities for employment. But there are some disadvantages to this sort of work. Especially for customer service work, employees might have to work night shifts to provide service to customers in a different time zone. In addition, difficulties with understanding a foreign language and culture affect the workers as well as the customers.

The reason that companies outsource labor is that they gain a big advantage—lower costs. The needs of customers and employees are probably not considered. However, customers and employees both feel the effects of this practice.

A decisive moment in my life is when I chose my career. This really was the most difficult decision of my life. My father always wanted me to be a doctor. Ever since I was a child, I knew that this was his plan for me. I always accepted it because it was what my father wanted. However; in high school I realized that I didn't want to be a doctor. There was nothing about it that interested me. I decided that I wanted to study architecture and learn how to design buildings. I was afraid to tell my father this because I knew he really wanted me to be a doctor. But I really wanted to study architecture, and I actually applied to be an architecture student. When I was accepted into the program, I knew I had to tell my father. So, I finally dared to tell him. He wasn't very happy about it, but he accepted my decision because he saw how much I wanted to do it. It was a difficult thing for me to do, to ruin my father's dream, but I knew I had to follow my own dream. Now I'm glad I did, and I think my father is, too.

There are a number of little difficulties I confront every day in my life as a university student. The first one is getting to my morning classes on time, because I like to sleep late. Some days I have class at 8:00 in the morning. I really don't like that. Another difficulty is trying to get all my assignments done. I always have so much studying to do—reading articles and writing research papers and preparing presentations. They give us a lot of work to do, and it isn't always easy to find time to do it all. That's the biggest difficulty, I think. I don't have much difficulty with the content of my classes. I think they're really interesting. And I get along with most of my classmates and my professors. Mostly I enjoy university life—just the workload is sometimes too much.

The chart shows the percentage of each site's total membership in three different age groups: adolescent, younger adult, and older adult. The statistics show that each site attracts more members of a particular age group. Site A is apparently more popular with younger adults than with adolescents or older adults. Close to half of the members of that site fall into the younger adult age group. Site B is much more popular with older adults than with people of other ages, since two-thirds of its members belong to that age group. At the same time, the site has very few adolescent members—only 7 percent of its total membership. Site C seems to be the site that draws the most adolescent members. More than half of its members are adolescents. A little more than one-third are younger adults. However, very few are older adults—only 10 percent of its total membership.

The kind of information I exchange with my friends online is usually just everyday information. I tell them what I did today or what my plans for the weekend are. If I go someplace interesting or do something fun, then I take photos and post them online. My friends and I post a lot of photos online. It's fun to see what everyone has been doing. Sometimes if I need some special kind of information, like I want to buy something expensive or if I'm looking for a job, then I post that online and ask my friends for help or advice.

I think it's really important for parents to pay attention to what their kids do online. Adolescents, especially, like to use the Internet a lot. It's the main way they communicate with their friends, but there are a lot of dangers for them online and they're too young to understand that. Parents should know what their kids do online, what sites they like to visit, what acquaintances they make. Maybe they should impose limits about

how much time their kids spend online. Knowing how to use the Internet is important, but it's also important to spend time doing other things.

I'm sure the trend will continue, but I can't say exactly how it will unfold. Things change so rapidly. But I believe that online social networking has already become a really important form of communication. Perhaps in the near future it will become the way that most of us find jobs. Maybe it will be the way that we find our husbands and wives. There are a lot of possibilities.

Women are an invaluable part of the workforce. We need the contributions that they make. Women should be allowed to devote some of their time and attention to their families without losing opportunities or status at work. The best way to do this, in my opinion, is for governments to pass laws requiring companies to support the needs of women.

Although attitudes have changed a little in some places, modern women continue to bear more responsibilities at home than men do. That is a fact of life in most parts of the world. I think the best thing we can do is acknowledge this situation and provide women with the support they need to meet these responsibilities. That is the only fair way because women's home responsibilities are as important to society as their professional jobs are.

Companies could be required by law to support women's needs. For example, they could be required to allow women time off when they have babies. They could be required to provide child care at the company so women could be close to their babies but still do their work. They could be required to allow mothers (and fathers, too) flexible schedules so that they can meet their children's needs: visit their schools, take them to doctor's appointments, and things like that.

Passing laws that require companies to support women's needs would show that society values women's contributions, both at home and at work. Because everybody benefits from women's work, it seems the fairest thing to do.

The most important career advice I have received was given to me when I was quite young. I was still in high school. I will always remember it. I was thinking about the university and trying to decide what I would want to study. My uncle told me to choose a career that was interesting to me and not to worry about what other people might say. He said a lot of people might try to influence me to choose certain careers for a lot of different reasons but to always remember that it would be my career. I would have to devote the years to studying for it, and then I would devote the rest of my life to working in it. I should choose something that I wanted to do, that I thought I would like, and I shouldn't choose something based on other people's reasons. That advice seems simple, but it's very important, and I can say it's helped me because I really enjoy my job now.

I'm a lawyer and there are a lot of pressures in this profession. Time is a big pressure. We have a lot of deadlines, and we always have to get a lot of work done in a short time. Another pressure is staying current. Laws and regulations change all the time, and we have to know about the changes, so we have to pay attention. I think those are the two biggest pressures, time and paying attention to changing laws. Then there are the daily pressures of any job, finding new clients, getting along with everyone at the office, things like that.

Ninety percent of the people without disabilities in this country are employed. At 85 percent, the employment rate among non-severely disabled people is not a great deal lower. However, severely disabled people have a very low employment rate. Only 25 percent of severely disabled people are employed. But even when disabled people are employed, they are still not as comfortable as people who don't have disabilities. The average monthly salary of people without disabilities is \$2,200, and for the non-severely disabled it is \$600 lower. Severely disabled people are in an even less comfortable situation, with an average monthly wage of just \$1,100. That means that they earn half the amount that people without disabilities earn. These statistics show that employment for people with disabilities is not a simple issue. It is not only about getting a job, but also about how high a salary a disabled person can earn.

SPEAKING

(sample response)

There are laws in my country that require public buildings to be accessible to disabled people—not only people in wheelchairs, but also people with other kinds of disabilities. For example, the floor numbers in elevators have to be in Braille so blind people can read them. I think these laws are a good idea because they give disabled people independence. That's really important. Think about if you were in a wheelchair: It would really change your life if you couldn't enter buildings or take the bus because you were in a wheelchair. But if buildings and buses and subways are accessible, you could go on living almost the same life you do now without a wheelchair. There is a drawback though. Changing buildings to make them accessible costs a lot of money. That's really a problem in places where there's a lot of poverty. Accessibility is really important, but it might not always be possible because of the costs.

I work in an office building, and it is accessible to people in wheelchairs. There are elevators, and they are all wide enough for wheelchairs. The buttons on the elevator are low so people in wheelchairs can reach them. On each floor there is a handicapped restroom that can accommodate wheelchairs. There is no need for ramps because the entrance is at the same level as the sidewalk, so there aren't stairs or steps to enter the building. I think the building is really easy for a person in a wheelchair to use, so I can't think of any improvements that are needed.

WRITING

(sample response)

Confidence is an important element in the learning process. In order to learn, students need to believe that they can learn. When students are given opportunities for success, encouragement from their teachers, and exposure to a variety of experiences, they can develop a strong feeling of confidence.

When students have opportunities to complete tasks successfully, this shows them that they really can learn. If you give a small child a book with lots of pages crowded with words, naturally she will feel it impossible to ever learn to read. However, if you give that child one page with a few simple words on it, she can learn to read the page quite easily. The child understands that learning to read is not only possible, but probably not all that difficult, either. The child gains confidence in her abilities.

Encouragement is also important. The teacher can show the child how to break a difficult task into small parts and praise the child's small successes. The teacher can give the child support to keep going until a difficult task is completed. If the teacher believes in the child's abilities to complete learning tasks and lets the child know this, the child will believe in herself, too.

Having a variety of types of learning experiences also contributes to a child's feeling of confidence. If a child has opportunities to work alone as well as in groups, then she knows she can work in different situations. If she learns to write about what she learns as well as talk about it, then she knows there are different ways that she can communicate information. Knowing that she can learn in different ways and in different circumstances helps her feel confident about her abilities to learn.

Confidence is an important part of learning. Building students' confidence should be part of all classroom activities.

SPEAKING

(sample response)

I think I would have to say that I'm an auditory learner because I like to talk so much. I was always getting into trouble in school because I couldn't keep my mouth closed, especially when the teacher was talking! But now that I think about it, I think that must have been because I am an auditory learner. I need to talk about what I learn. In school, I always liked it best when we had small-group discussions. I enjoyed listening to what others had to say and talking about my ideas with them. I always preferred classroom discussions to reading. It was hard for me to understand something I had read until we talked about it in class.

I'm definitely a social learner because I need to talk about the things I'm learning. I see some students spend a lot of time in the library, reading and taking notes. That's always been difficult for me. When I was in high school, if I had to go to the library to study, I always asked some friends to go with me. I didn't like studying alone. Even if my friends weren't working on the same assignments, I liked being around them when I studied. That must mean I'm a social learner:

Being alone hinders my learning, definitely. I'd rather have company when I study. When I was in high school, sometimes in class we would have to sit quietly and read the assignment. That was usually a waste of time for me. I just couldn't learn that way, in silence. On the other hand, when I'm with people who talk too much, that also hinders me. If I don't get a chance to talk, too, and have people listen to my ideas, that's not helpful to me.

I strongly believe that school should be compulsory for all children, with very few exceptions. Most parents do not have the professional teaching skills and range of knowledge that their children are exposed to at school. Only children who have special circumstances that prevent them from attending school should be taught at home, in my opinion.

Parents teach their children many things. They teach them skills they need in daily life, such as how to keep their rooms clean or how to tie their shoes. They teach them moral values such as honesty and kindness. These are very important lessons, but they are very different from the academic lessons children learn at school. Most parents, unless they are professional teachers themselves, do not have professional teaching skills. They have not been trained to teach academic skills such as reading, writing, and arithmetic. The best place for children to learn these things is at school under the guidance of professional educators.

Children are exposed to a much wider range of knowledge at school than they ever could be at home, no matter how well educated their parents are. At home, children have their parents and possibly also their grandparents. This is a limited number of adults. At school, on the other hand, children study with a variety of teachers. Each of these teachers has specialized knowledge about his or her subject area. This gives schoolchildren the opportunity to learn about many more things than their parents could teach them at home.

Some children cannot attend school for special reasons. Some live too far away from school. Some are professional actors and have to work during the school day. Some have physical disabilities or health problems that make it difficult for them to move around. In cases such as these, learning at home is the only choice. However, these are exceptional cases.

No matter how well educated parents are or how much they love their children, they cannot provide the same level of education that a school can. That is why I believe that school should be compulsory for all children.

SPEAKING

(sample response)

I think education should be compulsory for ages six through eighteen, that is, for first through twelfth grades. Some people think that compulsory education should start in kindergarten, but I don't think that's necessary. In kindergarten the kids just play and learn things like colors and numbers and look at storybooks. These are all things they can do at home, and five years old is too young, I think, to be away from home all day. Six is a good age to start school. In some countries you have to do only six or eight years of school, but I think it's really important to finish high school. The modern world gets more and more complicated every day, and I think everyone needs the things they learn in high school, even if they don't plan to go to the university afterward.

In most high schools, students have to learn some math, such as algebra and geometry. They have to take the basic science courses: biology, chemistry, and physics. They have to study the history and literature of their own country. I think all these things are important. Usually high school students have to learn a foreign language, and I think that's very important, too. These are all things that an educated person should know. It's basic knowledge. Maybe the only thing I would add would be international politics. The world is getting smaller every day, isn't it? We all should understand something about how other countries operate.

A problem with the schools in my country, especially in the primary schools, is the size of the classes. It isn't unusual to see a classroom with forty or even fifty children in it. Imagine if that's a first grade classroom with forty or fifty six-year-old children. It's impossible for the teacher to give so many children the attention they need. It's a really difficult situation, and the quality of education for little children really suffers from it. I guess it's a problem with money. To make smaller classes they would have to build more classrooms and hire more teachers. I guess the real concern is that the government is not spending enough money on education.

The charts show information about enrollment in remedial education at two different universities. The statistics are percentages of first-year students. There are significantly more students enrolled in remedial education at University A than at University B. Close to half (45 percent) of the first-year students at University A take remedial education courses. A little more than a third (35 percent) of first-year students at that school are enrolled in remedial math courses, and close to one-quarter are enrolled in other remedial courses: 22 percent in remedial reading courses and 26 percent in remedial writing courses. At University B, only 15 percent of first-year students are enrolled in remedial education courses. The smallest number, 5 percent, take remedial math courses, and 10 percent are enrolled in remedial writing and 12 percent in remedial reading. Clearly, there are many more students with math difficulties at University A than at University B. University B may have stricter requirements for math when they admit new students.

If I could choose to have any extraordinary talent, I think I would choose to be a painter. I really enjoy looking at art. I enjoy the work of many famous painters. I love going to museums and studying the paintings. I have tried painting a little myself, but I'm not very good at it. If I

could paint even half as well as Picasso, I would be very happy. However, I don't think that's very likely to happen. I'm not gifted in the arts.

I don't know too much about gifted education in my country. I think in some schools they have special programs for gifted children where they spend an hour or two in a class with other gifted children, and then spend the rest of the day in a regular classroom. I don't know of any full-time gifted education programs. Maybe some private schools have them—I'm not sure. When children have special artistic or musical talents, usually their parents hire private teachers to teach them after school.

I think education for everyone will be very different in the future. I think all education will be through the Internet, and that way education can be individualized. That means that any child with exceptional abilities will have a specialized program that fits those abilities. At the same time, children who have difficulties in certain areas will have special instruction to help with those difficulties. The Internet will make this possible because then children won't have to study just with the children who live in their neighborhood or just with the teachers in their local school. They'll be able to find the children and the teachers who match their abilities and needs and study with them. This will be good for everybody, whether or not they have exceptional abilities.

There have been many important inventions in the past 100 years, and they have changed our lives in dramatic ways. One of the more important of these inventions, in my opinion, is the cell phone. It is a device that has made both our work and our personal lives more convenient.

Because of cell phones, people are no longer tied to their offices. If someone has a business meeting in another part of town, she does not have to miss important phone calls because she is away from the office. Also, since it is possible to send and receive e-mail with many cell phones, it is very easy to take advantage of travel time to catch up on sending and responding to business e-mails. Cell phones are also very useful for people who travel a lot on business. Specifically, they make communication with the home office extremely convenient, and they make it easy for the traveler to continue attending to normal business responsibilities even when on the road. For reasons like these, cell phones have changed the way most companies do business.

Cell phones have also had a big impact on our personal lives. For one thing, they make it easier for families to stay in touch with each other throughout the day. Parents do not have to worry about their children because they can always reach them by cell phone. Children feel secure because they know that their parents are just a phone call away. Cell phones also make it very convenient for people to make or change plans with their friends and relatives. Cell phones have changed the way we interact with each other and the way we go about our daily lives.

Cell phones are always changing and becoming capable of more and more things. As cell phones continue to evolve, their impact on our daily lives will become even greater.

He was always doing interesting things, and I wanted to do what I saw him doing. He was on his school's soccer team, so I wanted to play soccer, too. His favorite subject

in high school was biology, so I was interested in biology, too. By following his example, I learned to apply myself in sports and in school. He really was a good role model for me.

The person who is an inspiration to me now is the president of the company where I work, Mr. Gomez. It's a small company, but a very successful one. Mr. Gomez started it from nothing. He had an idea, a dream, and he made it into a reality. He did it with hard work and brains. I'm learning all I can while I work for this company, because one day I want to start a company of my own just like Mr. Gomez did.

I find classical music very inspiring—certain types of it, fast-paced music. When I'm working, I always play classical music because it helps me concentrate, and if the music is fast paced or energetic, it gives me energy to keep working.

By looking at these charts we can see that very light jets are larger and faster than light sport aircraft. Light sport aircraft can carry at the most one passenger, and one of the models shown does not have the capacity to carry any passengers at all. The very light jets, on the other hand, can carry two to six passengers. Very light jets are much faster than light sport aircraft, with cruise speeds between 300 and 425 miles per hour. The fastest light sport aircraft, on the other hand, has a cruise speed of just 130 miles per hour. With their higher passenger capacity and greater speeds, very light jets are naturally a great deal more expensive than light sport aircraft. Prices range from just under \$1 million to well over \$3 million. Prices for light sport aircraft are much lower, ranging from \$39,000 to \$194,000 for the models shown.

I definitely prefer to work in isolation. I think it's much more efficient. When I work alone, I don't have to wait for other people to do their part. I don't have to change my work habits or methods to fit in with other people. I can work the way I work best and at my own pace. I get a lot more done when I work on my own, and I enjoy it a lot more, too.

It depends on the problem. Sometime I have to confer with others. Sometimes I know that a certain other person will have the information I need or has had experience with a similar type of problem. In that case, I confer with that person. But most of the time I try to solve problems on my own. It's like a puzzle. If I can come up with a good solution on my own, I feel proud of myself. Mostly, I prefer working alone, and I prefer solving problems on my own, too.

I like my work because it's all about numbers. I'm an accountant, and I chose this field because I love numbers. I could spend all day working with numbers. It may sound strange, but I really am enthusiastic about numbers. I'm happiest when I'm in my office by myself working on accounts.

Both perseverance and good luck are helpful ingredients for success. People may work hard to reach their goals, but finding some luck along the way is also nice. However, I believe that perseverance is much more likely to help someone reach success than plain old luck. You may sit around waiting fruitlessly for luck to come your way, but perseverance is something you can always control. In addition, you can create your own luck through perseverance.

From one point of view, luck is something we do not have any control over. Your friend may win the lottery, but you do not. That is not something that happens because your friend is somehow more deserving. It just happens. If you believe that reaching your goals similarly depends on luck, then you probably will not get anywhere at all. You might waste your time just sitting around all day waiting for opportunity to fall into your lap. It will not. It would be better to go out and do something yourself every day that will bring you closer to your goals.

From another point of view, luck is not really luck but the result of our own perseverance. Sometimes people say that getting that special opportunity you have been hoping for is just a matter of being in the right place at the right time—a lucky chance. But how did you get to be in that place at that time? It is probably because you have been working hard toward your goals. If you want to get a certain kind of job, for example, you answer job ads, talk to other people in your field, and do other things to find out where the job openings are. Pursuing these

activities makes it more likely that you will come across people who are hiring. You may have to persevere, but eventually you will meet the person who has the job for you. The day you meet this person it might look like luck, but it really comes about because of your own effort.

Luck is nice when it comes our way, but I think that perseverance is the thing that will help us reach our goals.

I'm in training to become a nurse. I think this is a really interesting profession because it has so many possibilities. To become a nurse you have to have specialized training, but there are different levels of nursing, so your training depends on what level you're interested in. At a minimum you need a certificate that means you've been trained in basic nursing skills like giving medicines and assisting patients. Some nurses have bachelor's degrees and some have master's or doctoral degrees. To get a nursing degree, you study a variety of subjects such as science, public health, administration, and more. You have to know about all these things. You definitely need a certificate or a diploma to become a nurse, but the exact kind you need depends on your goals and interests.

Nurses have to be good at a lot of things; the skills required for this profession are disparate. To be a good nurse you have to have a range of interests and be good at learning new things. You should be good at science and technology. At the same time, you need good "people skills." This is really important because the job of nursing is to help sick people. You have to be able to work well with them, to be kind and compassionate, to transmit a certain type of message through your interactions with your patients: "I care and I'm here to help you." If you don't have that attitude when you set out to care for your patients, you won't be completely successful. Good medical skills can't compensate for a lack of compassion or kindness.

Unit 1: Natural World—Environmental Impacts of Logging

Narrator: Listen to a lecture about trees.

Lecturer:

When you look at a tree, you may notice only the branches and leaves. A closer look shows that there's actually a great deal more going on. Trees provide homes to a large variety of terrestrial animals, from tiny insects to large birds such as owls. Insects live beneath the bark, providing a source of food for many types of birds. Squirrels and birds nest on the branches or in the trunk. Small animals defend themselves by hiding among the leaves. The benefits of trees also extend to aquatic animals. The shade from trees keeps water cool, protecting aquatic animals from the heat of the summer sun. The roots hold on to the soil, which keeps it from being eroded by the rain. This is a protection for aquatic habitats, as it prevents soil from running into the rivers and polluting them. Clearly trees are very important. If forests vanish because of logging or other activities, the impacts on the environment will be great.

Unit 1: Natural World—Bird Migration

Narrator: Listen to a tour guide at a bird sanctuary.

Tour Guide:

Welcome to the National Bird Sanctuary. The bird sanctuary provides us with the opportunity to study many aspects of the lives of the migratory birds that pass through here every year. This is a breeding area for many different species, and we'll likely see a number of them on our walk today. On our right, just past the entrance, you'll see a list of all the species that have been observed here. You'll notice several nocturnal species as well as diurnal. They spend the warm months here but leave in the autumn, as they can't endure our cold winters. Okay, take a look at your maps. We're beginning here at the entrance. As we walk through the sanctuary, it's imperative that you not stray off the trail and that you be particularly careful to stay out of the restricted area,

all along the trail to the left here. The restricted area protects breeding birds from disturbance. All right, then. That trail over to the right leads to the gift shop, but before we head there, let's continue to the end of this trail on the left, to the observation platform. *[pause]* Here we are. We can look out over the wetlands from here and observe the waterbirds. I'll leave you here to observe as long as you like, and I'll meet you afterward at the gift shop. It's at the end of that trail I pointed out to you earlier. Before I leave you, I'd like to remind you that this bird sanctuary was built entirely by volunteer labor and donations. You can imagine what a feat that was and what it takes to maintain it. Please consider giving a donation before you leave. You'll find a box for that purpose along the trail right before you arrive at the gift shop.

Unit 1: Natural World—Plant Life in the Taklimakan

Narrator: Listen to a class discussion about plants in the Taklimakan Desert.

Professor: We've looked at plant life in various deserts around the world. Let's talk today about plants in the Taklimakan Desert.

Student 1: What I understood from the reading is that there aren't a lot of plants throughout the Taklimakan Desert but that many plants live in the transitional area on the desert fringe.

Professor: That's exactly correct. Conditions in the desert are extremely harsh, but around the edges, plants have been able to adapt and thrive, and some species are actually quite prolific. Of course, the environment there is still extreme, and the plants have some interesting adaptations.

Student 2: There are still a lot of stressors on the desert fringe. The rain there is sparse, right?

Professor: That's true. The desert fringe is very dry and is subject to extreme temperature swings, and these conditions can cause plants a lot of stress.

Student 1: Another stressor is, because of the dry air, there's rapid evaporation, so it's difficult for the plants to hold on to the water they take in.

Student 2: I read that some plants are actually able to determine when they've lost enough moisture and have the ability to close their pores so they don't lose more.

Professor: Yes, that's one of the interesting desert plant adaptations. Another way plants thrive in the desert is by having large root systems so that they can accumulate water taken from deep in the ground.

Unit 2: Leisure Time—Peripheral Vision in Sports

Narrator: Listen to a class discussion about vision and basketball.

Professor: We've been discussing the way the eye works and the importance of vision. Let's apply some of this and talk today about how vision affects an athlete's performance. Okay, so when a basketball player, let's say, is out there on the court, what does he need to pay attention to?

Student 1: The player needs to focus on the ball. He needs to always know where the ball is.

Professor: Correct. That's important. But that's not all. The player also has to be aware of what the other players are doing. He has to anticipate their maneuvers so he can be ready to respond. This is where peripheral vision is important. The player may be looking directly at the ball, but he also has to be aware of what's going on near the boundaries of his visual range. He has to be aware of the actions around him.

Student 2: Players look at the ball, but they also scan the whole court, right?

Professor: That's right. They need to go back and forth between focusing on one point and scanning the entire game, so they can know what the rest of the players are doing. Of course, they don't stop to think about it. There isn't time. Good athletes do this unconsciously.

Student 1: They do it so fast, it's indiscernible to us when we're watching the game.

Professor: But they don't respond indiscernibly. When you see a player move in to shoot a basket, he's there because he was able to coordinate all the information he took in about the action of the game so he could make his move.

Unit 2: Leisure Time—History of the Circus

Narrator: Listen to a tour guide at a circus.

Tour Guide:

Good afternoon and welcome to the tour of the Springfield Circus. Today you'll get to see the circus rings up close, visit the places where the performers work and rest, and even meet an animal trainer and some animals. Let's start our tour with a brief history of the Springfield Circus. It was founded a century ago right here in Springfield and has been going ever since. The original owner sold it after twenty-five years, and it's been under ownership of the same company for the past seventy-five years. Although the owners have changed, the place has not. The Springfield Circus has always put on its performances in this venue. Unlike other circuses, it has never traveled around with tents but has always held its performances in this permanent spot. When the Springfield Circus was first founded, it put on large entertainments filled with grandeur for massive audiences. Since then, the show has been reduced in size somewhat with fewer performers and acts. The show always begins with its famous parade of exotic animals. This is followed by dancers on horseback, and then the clowns enter the ring. We may get a chance to meet some of them today. They're always the most popular part of the show. Okay, let's go out to the rings now, so we can see where the performers work. Hold on to your tickets, as you will need them to be admitted to the show after the tour.

Unit 2: Leisure Time—Uses of Leisure Time

Narrator: Listen to a talk about leisure time.

Lecturer:

There has been a good deal of research on how we use our leisure time. Study after study has shown the importance of using leisure time well. According to research, people who spend their leisure time engaged in passive pastimes such as watching TV actually end up feeling less rejuvenated than people who choose more active leisure-time activities. People who report feeling the most satisfaction with how they spend their leisure time engage in a range of activities for relaxation, both physical and intellectual. Among the most popular pastimes reported by adults, physical activities include a variety of sports, playing with their children, and gardening. Intellectual activities include reading, playing computer games, doing puzzles, and using the Internet. People who engage in a variety of active pastimes tend to be

healthier, both physically and emotionally. It is obvious that we need to engage in leisure activities that exercise both our minds and bodies to avoid suffering problems such as obesity and depression.

Unit 3: Transportation—First Headlamps

Narrator: Listen to a talk about early train travel.

Lecturer:

Train travel became increasingly common in the mid- to late-nineteenth century, despite the difficulties involved with this mode of travel. In many ways, trains were more efficient than other available means of transportation, but there were still drawbacks. Travel at night was tricky, for example, because trains lacked effective methods of illumination. Rides on early trains were often rough because of the way the train tracks were laid, although this improved over time and riding the train became more comfortable. As train travel became more popular, the tracks became more crowded, and this was one reason why trains were frequently vulnerable to delays. Train travel could also be dirty because the smoke from the locomotive could not be kept away from the rest of the train. In the early years of train travel there were few disasters, so passengers generally felt safe. Trains were the major means of long-distance travel for a long time and had major effects on society and the economy. Clearly, the initial cost of building the railroads was well worth it, despite the drawbacks involved.

Unit 3: Transportation—Major Subways of Europe

Narrator: Listen to two students discussing subways.

Student 1: We need to organize the information for our report on the history of subways. We agreed that our topic would be the London Underground.

Student 2: Yes, it's such an intrinsic part of London. It's famous worldwide. It really is the centerpiece of the city.

Student 1: And it's been around for a long time. We should mention that it first began operation in 1863. I think it's important to point out that at that time they used steam engines to pull the trains.

Student 2: Yes. That's really important information because steam engines were intrinsic to the way the system was built. The tracks couldn't be very deep because the engines had to release steam.

Student 1: Right. The tunnels had to be close to the surface of the ground, and there were vents to release the steam to the streets.

Student 2: So we should explain all that and then talk about how the system changed when electric trains were introduced.

Student 1: That made a big difference because the tunnels could be deeper since they didn't have to worry about releasing steam.

Student 2: And they had developed methods that made it possible to dig deeper tunnels because they used a sort of shield to support the tunnel while the workers were digging.

Student 1: Right. The Harlow-Greathead Shield.

Student 2: People were happy with the deeper tunnels because it wasn't necessary to destroy streets and buildings to dig them.

Welcome to City Bus Tours. Our tour today will take us not only through the city but also to some of the nearby suburbs as we explore the historical development of the area. Before we begin, let's take a look at this map, which shows the places we'll be visiting today. We'll start here, on the west side of the river, which is all urban area. We'll pass by the commuter rail station here, right by the river and near the bridge. This is a brand new station since the train system was completed just last year. Commuter traffic was becoming a huge problem in our area, and there's been a marked improvement in the traffic situation since the trains started running. After we look at the station, we'll cross this bridge, which spans the Rocky River. The bridge was built 100 years ago. At that time, we had the city on this side, but it was all rural area on the other side of the bridge. The building of the bridge accelerated development on the east side of the river, and now it's a growing suburban area with a lot of sprawl. On that side of the river, we'll take a look at some historic houses that still exist there, and then stop for lunch at Miss Mary's Restaurant.

Narrator: Listen to a tour guide at a museum.

Tour Guide:

Welcome to the university's Museum of Ancient Studies. As you may be aware, this museum was created by professors and students as a place to exhibit objects and information about ancient civilizations that they've uncovered in their research. Visiting scholars to the university have also contributed a great deal to the museum, and there's a room created especially for items they've donated. However, that's in Room D, near the end of our tour, so we'll talk more about that later. We'll begin here near the entrance, in Room A. This room is all about agricultural tools. It encompasses tools from several different cultures, and it's interesting to note the similarities and differences among them. You'll also find a few examples of agricultural-related objects in Room C, where we have an exhibit of items found in more recent excavations, but most of them are here in this room. Let's move ahead now to Room B. This is my favorite part of the museum. The exhibit you see in here explains the mythology of several ancient civilizations. Some of the old myths are lovely, fascinating. If you're interested in mythology, our gift shop has a number of books for sale on the subject. Okay, let's move now to our right, to Room C. Here's the Recent Excavations Exhibit I mentioned earlier. There are a variety of things in here that've been recently uncovered by scholars connected with the university: tools, cooking implements, clay tablets and tokens, and more. Just ahead is the Visiting Scholars' Room, and past that's the gift shop, in Room E. There, in addition to the books I mentioned, you can buy copies of many of the items on exhibit in the museum, so don't forget to spend some time there before you exit. Now, I'd be happy to answer any questions you may have.

Narrator: Listen to two students planning a hula demonstration.

Student 1: We have to get ready for our hula demonstration for our class. We need to show what we've learned about Hawaiian culture.

Student 2: Let's start with the decorations. I don't think they should be too elaborate, but we want to evoke a feeling of being in Hawaii.

Student 1: I think floral decorations would work. We can make garlands and leis out of paper flowers. They would be easy to make, and still give the right feeling.

Student 2: That's a good idea. What about our costumes? We need to be careful to avoid stereotypes like grass skirts.

Student 1: Since we're going to demonstrate the ancient style of hula, we don't need elaborate costumes. We can make simple costumes that look like tapa bark.

Student 2: Okay, I guess that wouldn't be hard to do. What about garlands of leaves? Aren't they part of the traditional costume?

Student 1: Yeah, they are, but I think the tapa skirts are enough. Otherwise we'll spend all our time making decorations and costumes.

Student 2: I suppose so. No garlands then. But we do need an altar. That's really important because that's part of what we learned about the place of hula dancing in Hawaiian culture.

Student 1: Of course. We'll have to spend some time on creating an altar. But we can't forget to actually practice the dances that we're going to demonstrate.

Student 2: Did we decide to use the graceful movements with all the swaying?

Student 1: No, we're demonstrating the ancient style. Remember? We're doing the energetic dances.

Student 2: Right, of course. With the traditional music, the drums and chants. Okay, let's start practicing.

Unit 4: Culture—The Art of Mime

Narrator: Listen to a talk about mime.

Speaker:

Mime is a type of performance carried out without the use of props or language. The mime's skill is the ability to make the audience believe that objects are present when in reality they're not.

Mimes create illusions of everyday activities. For example, a mime may act out climbing the stairs or opening a window, and do it so skillfully that it almost appears that the stairs or window are really there. Mimes use gestures to show the presence of

objects. For example, a mime may use his hands to outline the shape of a box, then climb inside the imaginary box. In addition to interacting with imaginary objects, mimes may act out stories in which they portray different characters. The stories usually show the characters involved in some sort of conflict, but it's all done in a humorous way meant to make the audience laugh.

Unit 5: Health—Nurse Migration

Narrator: Listen to a talk about training for nurses.

Speaker:

Qualified nurses must have several years of specialized training following high school. In the United States, for example, the bulk of nursing schools offer four-year programs. A nurse who graduates from such a program and then passes a licensing test is qualified for a variety of professional-level jobs. Many nurses choose to go on to graduate school and get higher-level degrees. In the United Kingdom, about 25 percent of nurses have graduated from degree programs. The rest generally have studied in two-year programs. This situation will change soon, however, and in the future all nurses in the U.K. will be required to have a degree in order to qualify for professional nursing jobs. Despite the need for nurses everywhere, there is still a decline in applicants for nursing programs. Many nursing schools in the United States have reported a decline of applicants of 5 percent or more over the past decade. This situation stems from a variety of causes. An important one is that more women are interested in professions, such as doctor or lawyer, which in the past were considered to be men's professions. It's been estimated that there will be 114,000 vacant nursing jobs in the United States by the year 2015.

- Patient:** Yes, I am, for aerobics classes, but I've taken other classes previously. I took yoga classes last year.
- Trainer:** So you've taken yoga classes. Very good. And why are you interested in exercise classes with us now? Do you have a referral?
- Patient:** Yes, I do. My doctor told me to call you. I've been feeling depressed, and she said it would improve my mood.
- Trainer:** I think we'll be able to help you with that problem. Medical research shows a clear link between exercise and mood.
- Patient:** Also I've been getting a little heavy, and the doctor thought that regular exercise would help me stave off any big weight gain.

Student 1: Right. Okay. Then we'll have to introduce the different substances to the culture.

Student 2: Yeah, and then carefully monitor it at regular intervals. I think every twelve hours would be about right. We should take turns doing that.

Student 1: Good idea. Let's leave a notebook in the lab so we can each record what we see. We'll have to ascertain whether there are any changes.

Good morning and welcome. I'm sure you'll enjoy your visit to this archeological site. One of the greatest mysteries of this site is the question of how it was built. How were the ancient people able to construct such spectacular buildings out of such heavy stones without the help of modern technology? We'll explore this and other mysteries pertaining to their culture during our tour today. Before we begin, let me go over a few restrictions. In order to preserve the site, we ask you to walk only on the network of paths, which is clearly marked. After the tour, you may walk around the site as you please, but remember that you can access the buildings only between ten o'clock and four o'clock. The grounds stay open until six. You can access any building you wish on your own except for the ceremonial area. That building is open only to groups with guides, and we'll be visiting it on our tour today. If you haven't bought your tickets yet, please do so now. They're available over here at the counter, fifteen dollars for adults and ten dollars for children. Customer: Hello. Yes. I have a vacation coming up, and I haven't taken a pleasure trip in a long time. I'm interested in ecotourism. Can you tell me about any trips you have coming up soon? My vacation is in January.

Agent: I'd be happy to help you. Let me just take down your information. What's your name, please?

Customer: Bob Henderson.

Agent: What kind of tour are you interested in? Our most popular tours are the Wilderness Adventure Tour and the Local Culture Tour.

Customer: Tell me more about the first one.

Agent: That's a nature tour. We take you to a remote area of the rain forest where you learn all about the local plants and animals.

Customer: It sounds interesting, but I'm a little wary of tours that feature wild animals.

Agent: Don't worry. You'll be in the hands of experts, and everything will be perfectly safe. Also, there will always be a barrier between you and the animals.

Customer: It sounds like an interesting trip.

Agent: It is. Shall I sign you up for the Wilderness Adventure Tour then?

Customer: Yes. What are the dates?

Agent: January twelfth through the twenty-fifth.

Customer: That sounds perfect. I have a question about the accommodations. What are they like?

Agent: There are two types. You have a choice between a fairly basic hotel or camping at the campground.

Customer: Oh, I'd definitely prefer the campground.

Agent: Great. I'll put you down for that. Now do you mind if I ask you something? How did you hear about our company? Did you see our publicity somewhere?

Customer: Yes, I saw it in a travel magazine.

Unit 6: Tourism—Learning Vacations

Narrator: Listen to a customer talking to a tour company agent.

Agent: Good afternoon. Learning Vacations Limited. May I help you?

Customer: I'm interested in taking a learning vacation. I understand you organize vacations with painting classes.

Agent: We do. We offer learning trips for a broad range of tastes and interests, and painting trips are among the most popular. Do you have a particular destination in mind?

Customer: Not really. I'd just like to go someplace pretty with colorful scenery for painting and maybe some nice ocean breezes.

Agent: Then you would probably be interested in our painting trip this summer. You spend two weeks at a beach resort in Mexico and attend painting classes under the supervision of university art professors.

Customer: University professors? That's impressive.

Agent: Yes. The trip is sponsored by the art department at Springfield University. It's part of their summer school.

Customer: That sounds great. My other interest is international cuisine. Do you have any cooking trips?

Agent: We certainly do. However, I don't know whether you'd be interested because almost all our cooking trips take place in a city, not by the ocean. Our clients get to enroll in ongoing cooking classes at the National Cooking Institute, which sponsors the trips.

Customer: So I would really learn to cook, not just watch someone else cook?

Agent: Yes. You learn how to choose ingredients, how to prepare them, everything.

Customer: What are the accommodations like? Would I stay at a hotel?

Agent: No. For the cooking trip, participants stay at a residential college that's close to the National Cooking Institute.

Customer: I think either one of those trips would suit my taste.

Agent: You need to decide soon. You'll have to enroll in the class of your choice, and then we make the travel arrangements for you.

Customer: When would I have to decide?

Agent: Enrollment for the painting classes ends on June 15 and for the cooking classes on July 1.

Customer: Thanks. I'll let you know soon.

Unit 7: Business—What Makes a Small Business Successful?

Narrator: Listen to two students discussing a small business.

Student 1: Okay, so our assignment for our business class is to explain the reasons for the success of a particular small business. We agreed to use the Sunshine Bakery for our model, right?

Student 2: Yes. It's a good example of several of the characteristics that are typical of successful small businesses. For one thing, it has its own particular niche.

Student 1: Uh huh, because there are no other bakeries in the neighborhood.

Student 2: Right. So even though its product isn't unique—it just sells normal baked goods—there aren't any competitors in the area.

Student 1: Yes, I think that's a vital part of its success. And its product is really good, so it already has a great reputation. Everybody knows about the delicious bread you can get there.

Student 2: So it has lots of customers. I don't remember reading anything about market research that the owners did before opening the business, but I guess it doesn't matter because there are lots of customers now.

Student 1: But the owners did start with a sound business plan. I mean, they projected all their expenses and how long it would take to start earning a profit and all that.

Student 2: Right, and the business became profitable in about two years. I think that's pretty good. And since they had enough financial support to start off with, they were able to keep the business afloat until then.

Unit 7: Business—Brand Loyalty

Narrator: Listen to a lecture in a marketing class.

Lecturer:

We'll talk today about promoting new products. Your main goal in promoting your products is to create brand loyalty, a bond between you and your customers. That way, your customers will keep coming back to you. How do you do this? The main point is to make your customers feel that your brand is somehow special so that they'll feel special when they buy it. They want to feel that using products with your brand gives them status. A common method is to get endorsements from famous people. Customers will think, "If I use the same brand as that movie star or athlete or television actor, then I'll be as special as that person." This also gives the idea that your brand is bought by selective people, which makes customers feel very good about buying it themselves. If you can make customers feel passionate about your brand, then they'll always buy it, whether your products are common household staples or expensive luxury items. This is what you want, a brand loyalty that's hard to reverse.

Narrator: Listen to a tour guide at a factory.

Tour Guide:

Welcome to the Apex factory tour. Let's begin with a little history of the factory. The Apex Manufacturing Firm has been in existence since 1900, when the company built the first factory right here on this site. It was quite a boon to the local economy since it was the first factory in this region. In fact, Apex was at the epicenter of manufacturing in this region for many, many years. Business was so good that in 1910, the firm's owners decided to add a night shift in order to keep the factory operating twenty-four hours a day. As you can imagine, the firm's owners became quite wealthy. The first branch factory was built in 1915. In 1940, the original old factory was completely torn down and

replaced with a new larger one on the same site. That's the building we're standing in now. Over the years, there have been a number of changes, of course. Then came 1998, which was perhaps the most decisive year for the company. The decision had to be made about outsourcing some of the labor, as many other companies were doing and are doing. The firm's owners ultimately decided not to do so. That decision means that at the present time, Apex remains a major employer in this region. There's a high level of satisfaction among our staff, as shown by the fact that our employee turnover is quite low.

Narrator: Listen to a class discussion about social networking.

Professor: Let's talk today about the online social networking trend. There's been an explosion of interest in this form of communication. What effects do you think this will have on our lives as the trend unfolds?

Student 1: It's clear that the advantages are immense. Think about it. These online social networking sites make it possible to have contact with people all over the world.

Student 2: I agree. You can pursue all kinds of opportunities, both personal and professional, through social networking. You can make friends, you can find jobs, you can exchange all kinds of information with people everywhere. It really expands your world.

Professor: These are important advantages, but do you also see any disadvantages to this phenomenon? What might be some of the negative consequences?

Student 1: I see that in one way it expands your world, but in another way it hurts it. I mean, you might spend so much time with your online friends that you don't pay attention to your local friends and family. It can mean the loss of your local community.

Student 2: There are also dangers with your online community. You can make many acquaintances online, but you don't necessarily know a lot about them. You might not know their true identity.

Unit 8: Society—Why Are Women Leaving Science Careers?

Narrator: Listen to a tour guide at a research lab.

Tour Guide:

Welcome to the Robertson Research Lab. On our tour today you'll see where researchers work, and you'll learn what scientific research is all about. Today, the Robertson Research Lab is one of the most important labs devoted to scientific research in the country, but it took a long struggle for the lab to gain the status that it enjoys today in the scientific and academic communities. It required an inordinate effort to get the support necessary to build the lab. In fact, it took approximately ten years to collect enough funding to start construction. That would not have been possible without the invaluable help of a number of individuals whose names are listed here on this wall. Although much of the funding came from government resources, and, of course, some of it also came from the Robertson family, the lab is located here at the university and it's the university that bears the responsibility for maintaining and running the lab. In fact, one purpose of the lab is to give university students experience with research. Professional research scientists at the lab provide guidance to science students as they design and carry out their own research studies.

Unit 8: Society—Wheelchair-Accessibility Issues

Narrator: Listen to two students discussing wheelchair accessibility.

Student 1: We have to plan our report on wheelchair accessibility in this building. The professor wanted us to see what accommodations are already in place and what changes need to be made.

Student 2: Right. So the first thing we need to do is walk around the building and see what's here.

Student 1: We've already done some of that. I have, anyway. I measured the corridors, and they're wide enough to accommodate wheelchairs.

Student 2: That's good to know because I measured some doors, both exterior and interior, and none of them has the necessary width.

Student 1: Then that's the first recommendation we'll have to make: wider doors.

Student 2: I think the building's exterior is fine. There's a ramp at the front entrance so wheelchairs can get inside the building easily.

Student 1: That's true, but didn't you notice that there aren't any curb cuts? The curb is too high for a wheelchair to get over. So, there's a parking place for disabled people in front of the building, but they still can't get a wheelchair over the curb and onto the sidewalk.

Student 2: Yeah, I guess that really would be a problem. So we'll have to recommend curb cuts.

Student 1: The building already has an elevator, so wheelchairs can get to all the floors.

Student 2: Right, so elevators aren't a problem. What about the light switches? Are they low enough on the walls?

Student 1: Yes, I tested some of them by sitting in a chair. They're low enough to reach.

Unit 9: Education—Learning Styles

Narrator: Listen to a lecture about learning styles.

Lecturer:

As teachers, when you plan your lessons, you'll need to keep in mind the different learning styles of your students. Remember that visual learners need to see things. Allow them to sit where they can easily see your face as you give the lesson. Remove any obstructions that might prevent this. Include visual items such as diagrams and pictures in your lesson to address the needs of these students. Auditory learners need to hear things. When they read, they may want to hear the words as well as see them, so allow them to read aloud and to recite information they're studying. Don't hinder their learning by requiring them to keep quiet during study time. Kinesthetic learners need to do things. To help these students, include activities that give them opportunities to move around and to manipulate items. While students may have different learning styles, they all have one thing in common: the need for frequent encouragement.

Unit 9: Education—The Homeschool Option

Narrator: Listen to a parent explain homeschooling requirements in her city.

Speaker:

Welcome to the City Homeschooling Association. Most of you are interested in homeschooling your children, and I know you have many concerns and questions about how to begin. I'll start by explaining to you the legal requirements for homeschoolers in our city, then in the latter part of the program, you'll have a chance to ask questions. There are certain things that are compulsory for homeschoolers in our city. First, to start, you'll need to inform the city that you plan to homeschool your children. Many people think that they'll have to hire professional tutors for their children, but that isn't required. Nor do you need to have prior teaching experience yourself. You do, however, have to follow an educational program mandated by the city, which addresses all the same subjects that are taught in the local schools. The city can provide you with textbooks, but, even though the vast majority of families choose to use these books, they aren't required. You can use any books you want as long as you follow the city's program. Periodic tests, usually twice a year, are required by the city. You can give them to your children in your home and send them to the Board of Education for scoring. It's easy to do and doesn't cost any money. At the end of the school year, you have to submit a report to the city, which is also simple to do. It's a short report, and the city provides you with easy-to-follow guidelines. Homeschooling is no longer considered a novel idea but is becoming more widespread. There are a lot of experienced families around who can help you get started.

Unit 9: Education—Educating the Gifted

Narrator: Listen to a class discussion about gifted children.

Professor: I asked you to read an article about recognizing gifted students in the classroom. So, tell me. How can a teacher recognize gifted children?

Student 1: One thing gifted children do is read. They usually read books for older children, or sometimes books for adults.

Professor: Yes, that's an important sign. Profoundly gifted children, especially, may be seen reading adult books at a very early age. What else?

Student 2: When it comes to problem solving, gifted children use sophisticated approaches, unlike their peers.

Student 1: Not all the signs of giftedness are positive. Gifted children might be bored in the classroom and behave badly. They often need help with discipline.

Professor: That's exactly right, and one reason why it's so important to recognize these children and place them in the proper environment and give them the support they need.

Student 2: One way to support them is to give them constructive activities that are interesting to them. If they don't have activities that satisfy their inquisitiveness and creativity, that's when discipline can become a problem.

Student 1: And, of course, we need to provide a special curriculum for these children. They need more than just some interesting activities. They need a whole course of study that matches their abilities.

Unit 10: Inventions—The Development of the Lightbulb

Narrator: Listen to a talk about producing and marketing inventions.

Lecturer:

When you have an invention that you think you can sell, you have to protect it. You must get a patent so that there will be no infringement on your rights to produce and sell the device you've invented. The first thing you must do is find out if anyone else has a patent on a similar type of invention. This is called a patent search. Often, people hire specialized lawyers to do this for them. Once you've ascertained that there are no patents on inventions similar to yours, then you can get an application and file it with the Patent Office. Generally you'll have to pay a fee when you send in the application. Next, you can start looking for investors. This is critical. Inventors tend to be solitary people and don't give much thought to finding financial backers to help them. However, if you want to successfully market your invention, you'll need people to provide money to start production and begin marketing. You'll need to think like an entrepreneur. Inspiration is not enough. Hard work and money are important ingredients for success.

Unit 10: Inventions—The Invention of Variable-Pitch Propellers

Narrator: Listen to two students discussing a flight demonstration.

Student 1: That was a fascinating flight we saw. Now we have to write up the report for the school newspaper.

Student 2: Okay. Well, we should start with the name of the designer of the plane.

Student 1: Right. I'll just write that down. The designer was Steve Wilson, and the pilot's name was Joe Applewood. What about the names of the passengers? Did you get those?

Student 2: No, but there were two of them, we can just put that. We don't need their names.

Student 1: We should say something about the design of the plane, like the size of the propeller. How big was it?

Student 2: I'm not sure. It was big, but I couldn't say the exact size.

Student 1: Well, we should say something about it. What about the speed of rotation? How fast did that propeller move?

Student 2: I don't know. If we'd had a chance to confer with the pilot, we could've found out. But he left too quickly.

Student 1: Okay, so we can't include that information. We'll have to write more about the flight. It was a really prolonged flight.

Student 2: Yeah, he was cruising up there for at least thirty minutes, a lot longer than I expected. So write that down. And what a flexible machine. It handled the turns really well.

Student 1: Yeah, especially considering the weather conditions. It was so windy and cloudy, there must have been some turbulence.

Student 2: There probably was. We'll put that in the report, too.

31**Unit 10: Inventions—The Transatlantic Cable**

Narrator: Listen to a tour guide at a museum.

Tour Guide:

Welcome to the City Museum of Invention. We'll begin our tour with a brief overview of the history of the museum. This museum first opened its doors in 1985, the result of years of effort by the mayor and others in our city. In 1975, the city's mayor first got the idea to start a museum about inventions. After he got several experts interested, he set out to rally the necessary funds. In 1976, several events were held to raise the requisite amount of money to begin construction of a building to house the museum. They had almost raised enough money when there was an unexpected setback. A family that had promised a large percentage of the needed funds inexplicably withdrew their offer. It was toward the end of 1977 that this large gift was lost. Although there was an inquiry, it was never made clear why the funds were withdrawn. Plans for the museum were put aside for five or six years. But a group of interested people renewed the efforts, and by 1982 they had rallied enough monetary support to go ahead with the plans. That year, construction on the building began. In just under three years, the museum was completed, the result of the perseverance of a number of dedicated people. The museum continues to be a popular part of our city's culture. Although everything in the museum follows the theme of inventions, the variety of the exhibits will appeal to visitors of disparate interests. Our most popular exhibit, which is all about cable TV, was first opened in 1998.
